SPACE
WATCH

By Ray Darskan

FOLLOWING the astonishing spate of UFO sightings, the government has set up a special agency to investigate the possibility that an alien invasion is already taking place.

The new agency, which is to be stationed at a top secret base in Potters Bar, Hertfordshire, will be codenamed Space Watch and its charter is currently being drafted out by Whitehall.

Informed sources tell me that among the special powers it is likely to be able to exercise, include

● Stop and search procedures on any aircraft suspected of harbouring alien life

● Close monitoring of unusually active radio wavebands with a special reference to the CB channels, where many people already claim to have overheard "alien conversation routines"

● Direct access to the radio telescope network and its search for the regular pulses which could indicate signs of intelligent life in the UK — Willesden has already come in for close attention

● And finally — and most controversially — the power to interrogate individuals who sight UFOs or claim any kind of "close encounter" with extra-terrestrial life. They have already had 76-year-old Gloucestershire grandmother Gladys (Ma) Shane (whose now famous photograph of a flying saucer over London is pictured right) closed away in Potters Bar for over six days.

And we do know that a Sinclair Spectrum microcomputer has been pressed into service to assimilate information on sightings.

Naturally the Government finds it difficult to admit the existence of agencies like Space Watch.

Foreign Body Office spokesman, Sir Geoffrey Robertson, confessed as much yesterday.

He denied that Space Watch exists in current Government thinking and said:

"It only takes on person to make claims about a secret government agency and everyone starts seeing them."

On being accused that a Government White Paper on Space Watch had already been published, Sir Geoffrey said:

"This is exactly the sort of mass hysteria I just described."

And asked to comment on the recent *Sun* story "Ma Shane in Potters Bar", he confirmed that: "She is helping us look into developments on her photograph."

I asked Sir Geoffrey to comment on current rumours that he himself has some 37 eyes on small green stalks. He said that the number was greatly exaggerated and anyway, the stalks were more the sort of mid-blue found in Arcturian sonnets.

The "alien" craft photographed by Gladys Shane above the Houses of Parliament. See story on left.

Galaxian Colony II!

By Our Science Correspondent

A COLONY of creatures from another galaxy are approaching Earth so a wail-like lullation, according to a report in the science journal *Which Cosmos?*

The author of the report, "Professor" Frances Covey D'Ingham claims the aliens will reach Earth in early November and feels they may make their landing under cover of fireworks displays.

He says that other scientists have come up with the same evidence he has, but

have chosen to put forward different theories to explain it.

Says the professor: "Just because these aliens' spacecraft aren't as spectacular as those created in the films *Star Wars* or *Close Encounters*, science tends to laugh them off. But although their spaceship design is admittedly lousy, the Ginger they represent is very real."

He first hit the headlines in the 70s with claims that Galaxians were on their way to Earth.

The professor, who claims a doctorate in Alien Fauna gained, he says, at the University of Extra-terrestrial life, has been written off by successive governments as "A complete and utter crank". But his beliefs gained new credence this year following his now widely dated prediction that Italy would win the World Cup.

He has done most of his work on an Apple Computer using AlienCak software in a study of TV crap and instant potluck commercials.

NEW ALIEN PANIC
in wild strawberry
patchBy Tom Sancukes
Country Staff

A WILTSHIRE market gardener says he has killed an alien being in his wild strawberry patch.

Allied Hickey made his claims to police after a struggle with the alien among his greenhouses and orchards just outside Swindon.

During the fight, Hickey says, the alien fell into a hole he had previously dug in an area of his allotments overrun by wild strawberries. He hit the creature over its "red squishy head" with a shovel before burying it in the ground.

But when aimed pollen dug into the ground where Hickey claims to have finished off his adversary, they only found strawberry remains — these are currently being analysed by forensic scientists.

Said Hickey: "I was out in the apple orchard inputting size readings onto my Atari microcomputer when this scarted horror leapt at me from behind the compost heap."

"Grabbing the nearby shovel, I fought back chasing it into the greenhouse complex."

"I got in a couple of good slings by the growbags, although it tried to do a runner, I eventually forced it

into this hole in the straw berry patch where I finished it off."

"It's caused no end of damage, I only hope this sort of thing is covered by my insurance. First those French Golden Delicious, now these."

Hickey showed out reports where the struggle had taken place and it would seem to have been a particularly violent one.

"I've already had some UFO protection league onto me about preserving alien fauna," said an unrepentant Hickey. "But what these people don't realise is this was a me-or-it situation."

Hungarian
Squares
PuzzleBy Ivor Storey
in Budapest

THE INCREDIBLE sequence of disappearances from Eastern Bloc countries has been credited to a "Bermuda Triangle" effect.

Over 27 dissident hikers who have gone missing under mysterious circumstances in the past six months are now believed to have entered areas where the Hungarian Squares phenomenon exists.

Apparently only tight thinking supporters of Soviet ideals can pass through these areas safely, says the report, which is based on data put together by a Texas instrument 990A microcomputer.

Watch this space

In September we proudly boasted that this was going to be the issue which put a capital "G" in Computer & Video Games.

An optimistic prophecy considering my ineptitude with a typewriter shift key, but there they are and we hope you like them.

Kate Clements' Space Watch gives a whole new look to Alien Invasion games and may revolutionise Mastermind-type code games too. But if making friends with the aliens smacks too much of pacifism then Kamikaze and Sharp Defender should make amends.

Brick Blaster gets this month's Government Health Warning: this game is addictive and may damage your keyboard's health.

VIDEO GAMES

You only have to look at the cinema screens to realise that Fantasy rules OK. And in computer terms, this fascination with things escapist surfaces in adventure games, role playing aids like computerised dungeons and computer moderated gaming.

Next month, we give you some guidelines to setting up your own fantasy world on computer. We are also taking a longer look at computerised puzzling with some for you to solve.

Among the games listings are: Four-a-Side Soccer, Uranum Ore, The Croydon Blag* and a lot more besides

*For those who aren't keen *Jewellery* and *Minder* last *Blag* is a critical terminology for a robbery

SOFTWARE GIANTS CLASH

There is a storm brewing in the games software industry which could change the way you buy your discs and cassettes.

While **C&VG** does not usually involve itself in industry news or comment, this was one story we thought you should be told about.

The issue is software copyright and the adversaries preparing for legal battle are industry giants Atari and Commodore. The battleground for this test case is Pacman and the key question will be: Can you copyright an idea?

The background to this case involves Liverpool-based software house, Bug Byte who first brought Atari's software protection policy to everybody's notice when they felt forced to withdraw the Vic-20 cassette Vicmen which Atari had claimed was too similar to their licensed Pacman game.

Bug Byte produced a press release which claimed they did not feel they were infringing copyright but did not have the resources to fight Atari and its massive parent, the Warner Brothers Corporation.

Commodore does have the resources and when Atari threatened to sue the large U.S. microcomputer company over its Vic-20 cartridge Jelly Monsters, the lawyers were called in.

There is no software copyright law in Britain at the moment although there is in the U.S. and both the computer industry and the Government feels that software

And there was my copy- all covered in garlic

In Transylvania you cannot always make it to the newsgagents on the right day. Last 16th of the month, I couldn't get out 'til late and my newsgagent had put a cross on his door. Well there hadn't been any plagues around (I talk to rats, I know these things) so I guessed he must be keeping my copy of Computer & Video Games.

Sure enough when I flew in the window, I saw my copy all covered in garlic — and it had Haunted House in it too! That's what I get for playing with my VIC all night, instead of terrorising the local peasants.

Anyway I had a little word just under my newsgagent's ear and now we get on fine.

Have a word with your newsgagent — fill in the form

To my newsgagent, Please deliver/ reserve me a copy of Computer and Video Games every month. Price 75p.

Name

Address

copyright is necessary and have set up committees to look into the best way to set out the laws. This test case may now save them the trouble.

The essence of Atari's case is that they hope to protect the innovative games designer and to ensure a higher quality of games software.

Arguments — sorry discussions — with writers from several software companies show that feelings run high on this subject and not all games writers want to be protected.

Atari usually take the part of the "Indians" in these discussions as a large corporation flexing its legal muscles.

Atari did not invent Pacman. The name Pac comes from the Japanese Pacu — meaning to eat — which shows its true origins. In the U.S. Pacman was the property of Bally Midway who produce the "official" arcade machines.

Atari bought the rights (licence) to put the Pacman name on the games cartridge for its TV games

centre console — a name you can copyright over here — so other companies played safe by using names like: Super Glooper, Snapper, Vicmen and Jelly Monsters.

Atari bought its way into that success, others programmed their way into it. If Atari proves its case then games designers with innovative ideas will clean up.

On the not so positive side, it may mean that some popular games may never find their way onto your type of home computer

My own feelings are that the software copyright tangle does need sorting out over here. And while Atari may be fighting the right battle to sort out that mess, they have chosen the wrong battleground.

The Atari VCS Pacman is a very different game from the one which everyone has been plagiarising.

As comment pieces go this is probably a little sn-on-the-fence-ish but I am reserving my opinions until Atari have had a chance to defend their decision to me.

Please drop us a line at: Computer and Video Games, EMAP, Durrant House, 8 Herbal Hill, London EC1R 5JB

EXCELLENT ENGINEER!

Dear Sir,
I am the proud owner of an Atari 400 computer, and buy your magazine every month. The Engineer listing in the April issue proved to be a huge success with everyone who played it. The listing itself was easily keyed in, and error-free. Thank you to the writers and also to you for publishing such an excellent game.

I would like to expand my 400 to 32K, and could I ask you which (if any) Ramcard Ingersoll and Atan approve of. Secondly, could you tell me which programs you shall be publishing for Atan in forthcoming issues. Keep up the excellent magazine, and don't forget Atan.

David Mills
Rochdale
Lancashire

Editor's reply: Officially the machine was only intended to be expandable to 16K. However, Calisto Computers of 118 John Bright Street, Birmingham, B1 1BE produce and fit a board. For approximately £100 which will take your Atari 400 up to 32K.

FEATHERED FRIENDS

Dear Sir,
Just as I was beginning to despair of finding a regular microcomputer magazine which properly acknowledged the existence of the BBC micro, I wandered into our local newsagents and found your first issue of the OWL supplement. Of course I instantly pounced upon it and placed a permanent order for your magazine.

Having had my BBC Model A delivered only a few weeks ago and having had very little Basic experience before that, although we do

have an ancient Pot at the office, I regret that I cannot yet think in terms of making a contribution to OWL.

In the meantime may I suggest that in the near future it would be useful to a lot of people if the tipster article could include some plain language explanations of some of the more obscure keywords in BBC Basic and their equivalents in other Basic dialects.

For example I get the impression that one uses one of the VDU commands in BBC instead of PEEK and POKE and although I'm presently still researching I'm not quite sure of some of the relationships. Richard A. Bates, Exmouth, Devon.

A WIZARD ADVENTURE

Dear Sir,
Would you oblige us by pointing out to your readers an error in the article by Keith Campbell headed Rooms at the Top in the March 1982 edition of your magazine.

Wizard's Mountain was not written by Jeremy Zorwood. It was written by my colleague Nick Spicer some two years ago for the Apple II when he was working for the Software House as a software consultant. The original version of the program which he wrote did not contain the bug which Keith Campbell mentions in his review. Who would try and compute the

log of zero for a watch — only somebody who was copying the program and did not understand even how the program was intended to function.

Having said all this we feel that Wizard's Mountain is now rather "old hat" and feel that you may be interested in the hi-res 21 colour adventure for the Apple II which is currently under development. Dick Williams, South Croydon, Surrey.

PRESTEL AND THE VIC

Dear Sir,
My VIC-20 and I have been very interested in your articles on Prestel. I already have a Beebox 40 Prestel graphics adaptor (e.g. 40 columns etc.) So what do I do now and how much will it cost?

Another thing which bothers me is, are the Telesoftware programs in Basic and if so what sort of Basic?

I don't see how a person with a Tandy using Prestel can use the same programs as a Commodore using a Prestel. Do you have to alter the programs for your machine?

Brett McLean,
Widborough Green,
West Sussex.

Editor's reply: You're at least halfway there with the Beebox adaptor.

Your next need is some Prestel software and a box that will allow you to connect to the telephone.

A number of people are working on systems to do just this.

You could try and see if one of the Tantal Prestel adaptors can be connected to your system. The cost is about £150-£200.

Telesoftware is machine specific — so you would only be able to download VIC software.

SOLUTIONS TO THE ZX...

Dear Sir,
In reply to D. McRuer of Shetland's letter, emphasising how, after a certain time, the unexpanded ZX81 will not EDIT.

I find that if the line to be EDITED is first LISTED, a following EDIT statement will carry out this function. For example if the line 570 is to be EDITED, key in LIST 570, after entering this enter EDIT and the command will be carried out.

Tim Hammonds,
Barnsley,
South Yorkshire

THE WISE OLD OWL?

Dear Sir,
Thank you for the very fair and perceptive review you gave my book *Let Your BBC Micro Teach You To Program* in the Owl supplement in September.

However, I would like to correct one slight inaccuracy. The price of the book is not as printed in your review. It costs £5.45.

Tim Hartnell,
Earls Court Road,
London.

WE SLIPPED A DISC!

Dear Sir,
I would like to point out a simple mistake you made in your September issue about disc drives for the ZX81. You proclaimed that there are no disc drives available for the ZX81 and none are likely to be developed. But...

Macronics is offering a drive and interface for the ZX81 for £160 which includes expansion motherboards and 2K Ram.

Kevan Thorn,
Dean Street,
Blackpool.

spectrum

**We won't be
be beaten on
price!**

SPECTRUM is a rapidly expanding group of independent retailers who specialise in selling home computers. Our pricing policy is simple - **WE WON'T BE BEATEN ON PRICE!** - for BULK BUYING savings only. We select and buy the best and pass the savings on to YOU, the customer. We **GARANTEE** that if you find us on any item currently advertised and in stock on another dealer and at a better price than we - **WE WILL MATCH THAT PRICE ON THE SPOT!**

**Only trained personnel
at Spectrum!**

We believe that our greatest 'know-how' is passed to you the customer. That's why a major part of our success has been the fully trained personnel, who have been trained by the importers or distributors themselves - as we have and understand the products we sell and can help every customer make the complete package. At SPECTRUM we find the RIGHT equipment to suit your needs. Having said that, we are not too far off - our service includes 'hands-on' experience that we pass on to YOU.

After Sales care

SPECTRUM service centres will ensure that should your machine go down we will get it running again as quickly as possible. We also offer extended warranties of reasonable prices too! - ask your SPECTRUM HOME COMPUTER CENTRE for full details.

Fantastic Value for money!

DRAGON 32

Enter the DRAGON! - this really is unbelievable value at only £173 from SPECTRUM! British built and designed, it's one of the most impressive micros to appear for quite some time. Featuring as standard a 32K RAM (expandable to 64K Bytes) plus it offers extensive facilities including highly advanced colour graphics for graphs, cartoon animation etc. It's the ideal 'Family Computer' and will provide hours of fun and education for YOUR family! - see it at your nearest SPECTRUM COMPUTER CENTRE now. But just one word of warning - at the amazing price they're already selling fast so make it soon, or phone before making a journey.

Just look at this top specification

- Powerful standard 32K RAM (expandable to 64K Bytes).
- 9 Colour, 5 resolution Display.
- Extended Microsoft colour BASIC (as standard)
- Advanced sound with 5 octaves - 255 tones.
- Professional style editing, e.g. extract line, auto find reinsert
- Professional quality keyboard.
- Centronics Parallel printer interface
- Serious programmer/user - the BASIC on this machine is similar to that found on machines costing 3 times the price!
- Uses almost any cassette recorder.
- Standard file handling ON TAPE.

Attention real computer enthusiasts!

ASCOM Special Edition

SAVE £15 on the PRINCE 11" Monitor

also purchase together with the NASCOM Special Edition.

Are you a real computer enthusiast? If you're looking for a machine to take you way beyond the confines of a normal domestic computer you need go no further than the NASCOM SPECIAL EDITION. To give you some indication of its scope it already has been adopted for many commercial applications including Hotel Booking Systems, Flight Grouping, weaponry & satellite tracking etc. Now SPECTRUM bring you the opportunity to embark on a remarkable episode in computing with the lethally seaplanable NASCOM. It's a terrific buy - Trade-In your old machine & trade-up to a NASCOM SPECIAL EDITION - NOW!

- Programmable in BASIC and machine code
- 11 Memory expandable easily to 512K with plug-in board
- Facility for up to 256K random access memory
- Copies colour graphic facilities
- Full range of disk drives, printers & various input/output facilities can be added
- Supplied complete with Mouse, Keyboard, Plug, TV, Monitor & Tape Recorder connections.

MICHAEL ORWIN'S ZX81 CASSETTES

The best software (by various authors) at low prices

QUOTES

Michael Orwin's ES Cassette Two is very good value. It contains 10 solid well designed games which work, offer plenty of variety and choice, and are fun.

from the ZX Software review
in Your Computer, May '82 issue

"I had your Investors-React cassette. I was delighted with this first cassette."

P Rubythorpe, London NW10

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

E H London SW4

"I previously bought your Cassette One and consider it to be good value for money."

Richard Ross-Langley,
Managing Director,
Mine of Information Ltd

CASSETTE 1

(eleven 18 programs)

machine code
React, Invaders, Phantom letters, Maze of death, Pzawl lancel, Bouncing letters, Bug split, Bzaz, Iching, Mastermind, Robots, Basic Hangman PLUS large screen versions of Invaders and Maze of Death, ready for when you get 15k.
Cassette 1 costs £3.80

CASSETTE 2

Ten games in Basic for 16k ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Clash, Roulette, Penton, Penny Shoot and Gun Com mand.
Cassette 2 costs £5

CASSETTE 3

8 programs for 16k ZX81

STARSHIP TROJAN

Repeat your Starship before disaster strikes. Hazards include espyvention, radiation, escaped biological specimens and plunging into a Supernova.

STARTRK This version of the well known space adventure game features variable Klingon motility and graphic photo torpedo tracking.
PRINCESS OF KRILL

An adventure game.
BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated rules.
CUBE Rubik Cube simulator, with lots of functions including 'Backstep'.
SECRET MESSAGES This message coding program is very big and if.
MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.
Cassette 3 costs £5

CASSETTE 4

8 games for 16k

ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves.

GUNFIGHT

Machine code

EUNGALDIDS (machine code)

Galaxy Invaders (machine code)
Fleets of swooping and diving alien craft.

SHAKENITE (machine code)

Eat the snake before it eats you. Variable speed. Every fast at top speed!

LIFE (machine code)

A 3D1 version of the well known game.

3D TAC-TAC-TOE (Basic)

Played on a 4x4x4 board, this is a game for the brain. It is very hard to beat the computer at 47 of the 8 games as in machine code because this is much faster than Basic. (Some of these games were previously available from J. Steadman).
Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:
Michael Orwin, 25 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

SPECTRUM SOFTWARE WANTED

MAILBAG

TRANSLATING SPECTRUM

Dear Sir,
Please could you tell me how to translate the statement, "ON x GOTO ..." into Spectrum Basic?
Simon Procter,
Newport,
Gwent.

Editor's reply: ON x GOTO ... can be replaced with the following, rather awkward expression when using the Spectrum.

IF x = 1 THEN GOTO a
IF x = 2 THEN GOTO b
IF x = n THEN GOTO ...

EINSTEIN A-GO-GO

Dear Sir,
I was intrigued by David Langford's article, entitled Einstein a-Go-Go in the May edition, of your excellent magazine.

In fact it was so interesting, I felt compelled to write. There were two points not fully explored which I found mentally frustrating. So I was wondering if you could help out — without becoming too technical.

Which cosmic law dictates that faster than light (FTL) travel is impossible? Surely anything which travelled FTL in the universe would by its own speed, be invisible, and therefore very difficult to detect.

At the (velocity of light) C, a spaceship's mass would reach infinity. This may be so, yet if a spaceship could break the "light barrier", then would not all the laws be reversed at speeds in excess of C? Until finally, the spaceship became infinitely easy to propel. Also at such speeds what would the human eye see — if anything? Would light rays emitted from objects beyond the spaceship, not be able to reach it? Thus giving the impression of a void, behind.

Vision would be cut by 80 per cent, only being able to see objects in front of the spaceship. Also the objects off to the side, will they be seen where they are, where they have been, or where they are going to be? So foreseeing the future!

The article said that it would take 10,000 years to travel across the galaxy. This seems to indicate that there is an edge to the galaxy. If this is so, what is beyond that edge? Perhaps another galaxy. But surely even galaxies must end at some discernible edge? What exists beyond that edge?

People once believed the earth was flat, this of course was not true. What shape is the galaxy or galaxies, or is man's brain not old enough to comprehend, only to question?
R. M. Cooper,
Hallifax,
W. Yorkshire

David Langford replies: To answer all the questions here would take a whole book! One such book is *The Science in Science Fiction* by Peter Nicholls, Brian Stableford and myself, to be published by Michael Joseph later this year. The *Pelican Relativity* for the *Layman* is also worth a look.

Einstein's well-tested Special Theory of Relativity predicts that we can never travel faster than light since our spaceship's mass would swell to infinity as we approached velocity c. We'd need infinite energy, infinite fuel, to accelerate to c let alone faster.

But there may possibly be particles called tachyons which 'naturally' travel faster than light: the equations say the mass of a tachyon would be an imaginary number, implying either that they can't exist or that they can't in our universe. Worse, it's quite clear that it would take infinite energy to slow a tachyon to less than c: the 'light barrier' is impassable from both sides.

Mathematicians have even worked out that from the viewpoint of a tachyon creature, it's we who would seem to be travelling faster than light — we would seem inaccessible beyond the light barrier.

The general opinion is that something travelling FTL would exist (if at all) in a different "tachyon universe" beyond any hope of detection — both invisible to us and unable to

detect us. This is just as well, since most of present-day physics would fall apart if it were possible to outrace light and effectively peep into the future!

Finally, the cosmological questions. Our galaxy is a multiple spiral of stars around 10,000 lightyears across; light takes about 10,000 years to travel

across it and our slower-than-light spaceship must always take a little longer.

There are very many more galaxies, out to as far as our telescope can see.

Now hold onto your hat: we believe there's a limit to the number of galaxies all right, but also that there's no edge. The General Theory of Relativity shows that space is curved through four dimensions in the way that the Earth's surface is curved through three. And, just as if you tried to reach the edge of the Earth, a long enough journey would take you right round the universe and back to where you started.

THE WONDER OF GRAPHICS

Dear Sir,
Now that I have discovered your excellent magazine, I have developed an even greater interest in computers. I do not yet own one of my own, nor have I ever seen any of the more sophisticated games played on a home computer. So being naturally curious, I wonder if you wouldn't mind answering a couple of questions for me. First of all, is it possible to

achieve the same degree of definition and speed of graphics on a home computer as on a good dedicated games machine such as the Atari, Philips or Intellivision?

I understand that the computer executes statements one at a time in numerical order (except for loops and jumps), so how is it possible to have dozens of objects all moving on the screen simultaneously, such as in Space Invaders or Galaxians?

Mr A A Birch,
Penrith,
Cumbria.

Editor's reply: Your home computer, with some decent software should be able to give you better definition and animation than a dedicated games machine. Most good games use machine code — which is about 10 times faster than programs written in Basic. Even when using Basic the speed of execution is fast enough to fool the eye!

BASIC WORDS OF WISDOM

Dear Sir,
I've had your magazine on order since the first issue, and think it is the most useful and interesting magazine out.

I'm writing to see if you can help me with the Peek and Poke locations on my computer. I have a TRS-80 Level II, and do not know many of the useful locations in the Basic Vectors on it.

I know about the keyboard scan locations, but can you recommend a book (other than TRS-80 Assembly Language Programming), which will have these locations in?

I am also doing machine language programming, so any of the Rom subroutines (such as the random number generator) locations would also be appreciated.
Andrew Wright,
Walsall,
West Midlands.

Editor's reply: A good book to look out for is 'More TRS-80 Basic' by Luman, Zamora and Albrecht. But the book you quoted, 'TRS-80 Assembly Language' by Howe is still the best introductory publication.

WORD OF THE KSIFFCHI

Ksiffchi are blue-furred marsupials, with a capitalist economy and a liking for alcohol. In other words, they are typical merchants.

This description comes courtesy of Marcus Rowland, the Ksiffchi's human mentor, who is currently guiding them through *CAVG's* Starweb game.

By now, the game should have progressed sufficiently for these early comments on Ksiffchi tactics not to affect their aim to become the dominant force in the known galaxy.

Hearken then to the words of the Ksiffchi as translated by Marcus...

Had I realised that you could prey starweb in England, I might have signed on years ago. Within a few weeks of winning my rule book, the first printouts arrived and confusion set in.

The printouts are meaningless without the rules since each world has a coded situation report on population, resources, industries, military status, and a host of other information. It takes a lot of study to understand what's happening.

The competition game made things easier by pre-generating the first two turns, in which my race (now called KSIFFI by Starweb's economical computer) expanded to 10 solar systems. In the third turn I started to write orders, deciding to expand my empire by sending

fleets and probes to neighbouring systems while consolidating defences in the inner systems. I had a feeling this might soon be necessary.

In the fourth turn I encountered three other empires, and one of my worlds' defence forces ambushed another player's fleet. I don't know what is going to come of these encounters, but I suspect that my defence work was a wise move.

As things stand, then, my position is rather interesting, since my score is relatively low and my empire is still underdeveloped.

I hope my moves this turn will rectify this situation, if not I'll try to go down fighting. The next few turns should be fairly decisive.

The solution to September's Nevera Crossword is printed above. But our September Mind Routines was more tricky than usual. The figure in the "H", "N" box should have been a "4" and not a "2". So we have extended the deadline by two further weeks on this. Entries by 1 October, please.

More Brainware on page 82.

Winner of our August Mind Routines problem was Mr S. Templer, of Hayes, Middlesex. The crossword winner was Mr A. Doherty, of South Ascot, Berkshire.

WINNING DAYS

Our hoped-for Tron competition has had to be put back an issue because of space prussers — the publishing kind, that is.

But we hope to bring it to you next issue. November also sees the introduction of a competition so different that it is going to take us three issues to get it going.

A unique competition has come to our attention. Portsmouth-based Automata is producing its own version of the successful "Masquerade" puzzle. Pimanle is the name of this adventure type game and Automata is putting up a prize valued at £6,000 for the first person to solve it. More details next month.

For the last word on competitions this issue, don't forget to let us know the best game we have published for your computer, since we launched.

Your votes could influence the Games Designer of the Year competition we have been running over the first 12 issues. A trip to Paris is at stake.

Confessions of a Bug

Perhaps you heard the editor grovelling on the phone this month...

"No I'm terribly sorry, it's a complete mystery to us... we had it working in the office just before we listed it... I think someone must have sat on the keyboard..."

YUKI Pathetic creature. Anyway the truth is that Mini Defender was a Screaming Foul-up special. We don't let him out much these days. But when we do...

The offending lines are as follows.

40 LET B\$(E)=CS
70 FOR E=9 TO 2 STEP -C
200 NEXT B

One line which wasn't even traced with a line number was 80

which got mixed up with line 70. It starts at: PRINT AT D,D; and continues until the end of that line.

Martian Explorer (August) had more of T. Hitch's subtlety about it. Line 4115 is a clear screen command and lines 4130 and 4140 contain a no. of graphics characters in inverted commas. Type in the following with the CTRL key depressed:
4130 ? "FUEL (8 spaces) 0
ZRXXRXXRXXRXXRXXRXXZ 100"
4140 ? "SPEED -60 ARSRSRSRSR
SRS RSRSRSRRA 60"

The central SRS should be printed in inverse video.

Several enquiries about Bomber last issue but we never touched it. If in difficulties check your "I"s and "1"s.

An exciting new Commodore peripheral

Own or use a Pet or a Vic?

Fed up with being ignored by all the traditional monthly magazines?

Fed up with listings, which are too simple or simply do not work?

You need *Commodore Computing*, the new monthly magazine. *Commodore Computing* is published by Nick Hampshire, author of *The Pet Revealed*, *Pet Graphics*, *A Library of Subroutines* and *The Vic Revealed*.

Each issue is packed with advanced

advice on how to make the most of your computer, whether you use a Pet or a Vic.

Each issue covers a host of applications – software, hardware, machine code, games, business use – whatever it is you'll find it in *Commodore Computing*.

If you want to learn more about your computer, take out a subscription to *Commodore Computing*.

That's the only way to get it, and get it straight.

Send £12.50 for 1 year's subscription (10 issues) to:

INNOVATIVE TRS 80-GENIE SOFTWARE from the professionals

Fantastic new flying simulation

Occasionally a program comes along of such magnitude that it is hard to describe it, especially within the space allowed in an advertisement. Jumbo is such a program. There have, of course, been flying simulation programs before, but they have all either been the type of trying to produce a graphic representation of the ground at some range or other in the program, thus taking up space, and/or they have concentrated on the single act of flying, in other words, although one gets the feeling of flying a small aircraft, one is not going anywhere.

Jumbo is a fantastically accurate simulation of flying a Boeing 747. These planes are not small, and are not flown by eye. They are flown by eyes and instruments, and the instrument graphics in this simulation are really first class. As you may know, the primary instrument of an aircraft is the artificial horizon. This is simulated very well, and includes instrument landing approach monitors. Graphical maps of very high quality are produced and it is possible to fly in all of the British Isles including Southern Ireland, and to New York on the Eastern U.S. seaboard. The actual airports are at London, Birmingham, Manchester, Prestwick, Edinburgh, Belfast, Shannon and New York.

The program was written by two authors who combined their joint skills to produce a unique piece of software. The programmer got the last byte of performance out of the machine and the pilot the last drop of enthusiasm out of the simulation. Other simulation programs produce at best a merely tentative flying. With Jumbo you really feel that you are behind the controls.

The author has made a number of ground-breaking techniques. For instance, it is possible to switch on an automatic pilot and to jumbo forward in time in increments of one minute or one hour - otherwise of course a flight from London to New York or vice versa would take some 8 hours to simulate. Whilst in this time skip the various controls are left as they are but fuel consumption and distance to go are taken forward at their correct rate.

A chart is supplied containing various items of data which you will need, including the take-off data for a 747 with various take-off weights, flap settings, climb and cruise speeds and descent distances.

Realising that not everybody can fly a 747 and that there is even a large proportion of the population that cannot fly anything, two important items of assistance have been added. First of all is the documentation. This is split into two parts. The second is a manual on flying the 747. In other words, the instructions for running the program. The first part, however, is what amounts to an instruction manual for flying. It assumes that the user knows nothing about aircraft and although we do not purport that it gets anybody up to any sort of standard either it has been assimilated, the reader should have sufficient knowledge of flying and the theory of flight to fly in the program itself. The second feature of assistance to the novice pilot is a checklist in the program which encodes this need to practice landing. When the program is started, if one presses the P key, the aircraft is automatically put 11 miles out from London Airport approaching on an instrument landing.

The controls are pretty well complete, even to dive and wheel brakes. The flying track may be continuously monitored on the map display. Bearing and distance to your intended point of landing are available all the time. The instruments, incidentally, consist of:

Artificial horizon	Altitude	Fuel
Altimeter indicators	Compass	Elapsed time
Indicated airspeed	Turn indicator	Distance to landing
Power setting	Flap indicator	Rate of climb
Elevators	Altimeter	

Six maps may be chosen, as follows:

Scotland, Northern England, Southern England, Ireland, Eastern U.S.A. The whole of the U.K.

Route information and present position is shown on the map displayed. It is very difficult to think of any factor that this software have overlooked. Even the quite meaningful thing of the sea with increasing height, which greatly affects the ground indicator in real life, is taken into consideration. Rather than having a fixed stalling speed, this continuously changes with the height configuration. The weight, height and power setting again as it does in real life.

We like to think that we publish good programs. Jumbo is outstanding. It is available on tape or disk for 16K or 32K memory machines. It is compatible with the Model I and Model III Tandy, Video Genie, Genie II and Genie III machines.

Tape	£15.00 + VAT = £17.25
Disk	£17.00 + VAT = £19.56

AMERICANS SEND IN THE ALIENS

ZENTH

A dual sensation of flight and speed are the two key attractions in a new 3-D space game from America called Zenth.

You mission defend the new space city which is being constructed to house the inhabitants of the old galaxy. The aliens are attacking. Sprattling towards you in colourful geometric shapes.

You wrestle with the joystick in an attempt to keep your ship steady, and get the aliens in your gunshots — as the chequered ground sways to and fro, zooming past beneath you.

Zenth is one of a new series of games for the Apple II from the new American software house Gebbels. The game is sold

DEATH LURKS BENEATH THE WAVES

BBC POLARIS

A watery grave awaits you if you do not sink the enemy fleet that is advancing on your submarine at a rate of several knots.

"Up periscope" you scream at a trembling crewman, survey the horizon to spot two corners complete with jets, depth charges, and anti-submarine helicopters.

The enemy ship is in range of your heat seeking missiles. You must give the command it's kill or be killed. But can you do it?

All those hours spent at the simulator at naval school flash through your mind. You must have downed dozens of ships there every afternoon. But then that was just a game — this is the real thing. You pull yourself together and blurt out the vital command "fire".

BBC Polaris simulates the action of a sea battle with you as the captain of a Polaris submarine. The game runs on the Model B, and costs £8.00 from Liverpool based Bug Byte.

Space Pirates is an Asteroids

in this country by S B D, of Richmond at £21.50, together with the two other space games — Laser Silk at £18.00 and Phaser Fire at £18.50.

Also new from S B D, this month is an insect war game called Fly Wars.

You are a spider crawling around the screen weaving a web, when suddenly you are attacked by a variety of pests. Fly Fighters can be easily trapped in your web.

Fly Wars runs on an Apple II in 48K and is available from S B D at £17.95.

type game in which you must protect your supply of space eggs from a relentless onslaught of meteors and alien ships. The game runs on the BBC Model B and costs £8.00 from Bug Byte.

Budding chess supremos will welcome this latest edition to the Bug Byte range of games for the BBC computer. The game features a high resolution display of the board in full colour. It has a quick response on the lower skill levels, enables you to set up chess problems and retain games on tape. Chess costs £11.50 from the Liverpool firm.

WE TAKE MORE CARE OF YOU!

JUMBO

Pilot a Boeing 747 on a trans Atlantic flight from Heathrow to Kennedy airport in New York without leaving your front room.

This flight simulation game is based as closely as possible on the actual controls of a Jumbo jet. You have a choice of six

destinations in the UK and six in the States.

Molmex say they are selling more copies of this game than of any other game they have ever sold.

The game runs on a TRS-80 or a Genie I or 3 and it costs £15 plus VAT from the Bexhill-on-Sea based firm.

Also new from Molmex this month is an underwater sea battle game in which you captain a submarine and attempt to sink the enemy fleet which is bombarding you with depth charges from the ocean surface.

Seewolf runs on a TRS-80 or Genie I and 3 at £8.75 plus VAT.

War gamers will welcome a return to the eleventh century in a battle between the Saracens and the Crusaders also available from Molmex at £11.75 plus VAT and runs on a TRS-80 or Genie I and 3.

ENCOUNTERS OF THE NASTY KIND

METEOR STORM

There are close encounters of the dangerous kind in this latest game from Sinclair's new baby.

Two different types of flying saucer and a bombardment of meteors are featured in the latest Asteroids type game for the Spectrum.

The game features thrust, fire, and hyperspace — moving left right on the keyboard thus recreating the principle features of the arcade version.

You also get a personalised score read out at the end of the game and a hold facility.

This enables you to make a cup of tea or answer the door, and then take up the game where you left off when you are ready to take on the aliens again.

The game also talks to you utilising the standard sound capabilities of the machine.

Meteor Storm is the latest game from Southampton based Quicksilver in the race to produce games for the Sinclair Spectrum. The game can be purchased from Quicksilver at £5.95 inclusive.

INVITE THIS BANDIT INTO YOUR HOME

CASINO

Tired of walking to work when you have put your last 20p in the fruit machine down at your local?

Here is a way to kick the habit gradually with a fun version of the seaside pier favourite which offers you all the excitement of the real thing, but is a lot easier on your pocket — and your feet.

The game produces the three wheels on your screen which spin when you tap the appropriate key. The wheels stop one after the other and feature all the fruits, bells, and crowns of a normal one armed bandit.

Card sharks will also enjoy the pontoon game which is colour coded on the B side of this cassette.

Casino runs on a ZX81 and is available at £2.50 from A. Stokke, Harrogate, Yorkshire.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS NEW GAMES NEWS

JUST WHEN YOU THOUGHT IT WAS SAFE!

BBC INVADERS

Having colonised just about every microcomputer on the market those power mad Space Invaders are on the offensive again — this time gunning for the BBC model B.

These Invaders have learnt a thing or two from previous campaigns — namely the ability to fire missiles diagonally, as well as vertically. They can also move at six different speeds, and fire missiles at three different speeds, depending on the skill level you select.

Experienced Invader duelists will enjoy the fleet advancement feature on this game which cause the fleet to jump down the screen each time you go onto a new fleet.

The game gives you a comprehensive score and performance read out at the end of each game. You are told how many ships you hit, and their types. The number of shots fired, and your percentage success.

BBC Space Invaders is available

THE LIGHT FANTASTIC

LIGHT PEN

Light pen games are becoming increasingly popular especially with younger users. An electronic pen enables you to locate and then move characters on the screen — for example chess pieces or the counters in the game Go.

A light pen for the VIC-20 is manufactured by Stack Computers of Merseyside. It costs £25.95 plus VAT and comes complete with an instruction manual and a free copy of the paid guessing game Concentration.

Other games from Stack to be used with the light pen are Backgammon, Life, Solitaire, Draughts, Othello, Go and Ludo. These family favourites all come on cassette for the VIC-20 and cost £5.00 each.

able from Lands based Program Power at £5.95 plus VAT.

Also new from Program Power this month is Astro Navigator, a game in which you must navigate your space ship through a series of undulating caverns full of giant mice whose main aim in life is to stop your ship and eat its inhabitants.

Astro Navigator runs on the BBC model B and costs £4.95 plus VAT.

COMMANDING YOUR OWN BATTLE ZONE

TANK ATTACK

Tank Attack puts you at the controls of a tank deep inside enemy territory.

From your screen mounted gunsight you can see enemy tanks, planes and flying saucers appearing from a range of hills in the distance. You must shoot these to score points but beware of their return gunfire which can destroy your tank in a split second.

Games players familiar with the arcade game Battletania will welcome this addition to the software range available for the VIC-20. The game is a plug-in Rom cartridge and is available at £24.99 from Reading based Audiogenic.

SOLVE THE SECRET OF THE SPHINX

SPHINX ADVENTURE

Sphinx Adventure takes place in ancient Egypt against a backdrop of pyramids, mummies and priceless treasure.

This text only adventure is a long drawn out test of your powers of reason and perseverance. You must collect treasure and bring it to the Sphinx — but watch out for the Trolls and Goblins who by some evil magic have

MEET THE HAPPY EATER

THE GLUTTON, MOON LANDER

These greedy electronic termites of the arcades are at it again. This time they have munched their way into the Sharp MZ-80K in a new Pacman type game

called appropriately enough — Glutton.

The Glutton is guided through the maze using four keys which move it up, down, left, or right.

The Glutton's aim is to gobble up all the dots in the maze and then start eating his way through the next one.

This new screen will appear as soon as he has eaten all the dots.

Just as in the arcade version, the ghostly quartet of creatures Inky, Blinky, Pinky and Clyde are hot on your little Glutton's tail. They are as anxious to eat him as he is to eat these dots.

Also new for the MZ-80K is a space game called Moon Lander.

This game is based on the time-honoured Lander tradition. You have to land a space ship on a barren and rocky planet before you run out of fuel and crash. Glutton and Moon Lander are available from Sharpsoft of London. Each cost £5.85 including VAT, postage and packing.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCT GAMES NEWS

SPACE AGE VERSION OF THE STING

SWARM

The ultimate science fiction horror theme comes to computer games.

A queen bee is an unwitting guest on board an interstellar space shuttle near Kroton — the fifth moon of the planet Zarg, an alien energising gas enters the ship through a damaged retro-rocket. The humanoids on board are shielded from the gas by their helmet purifiers — but not the bee.

You arrive on the scene as a queen bee the size of a Harrier jump jet appears at the top of your screen. She immediately starts laying her eggs in a long snaking cocoon moving right and left across the top of your screen. Armed only with a laser base you must shoot accurately and shoot fast before the super-bees hatch out and swarm towards you.

Once they start swarming their giant stings become difficult to avoid as they rain down from above. You have three lives with

a bonus life for every 1000 points scored — points are awarded for the number of bees downed.

Swarm runs on the Acorn Atom in 12K and costs £4.95 plus VAT from Leeds based Program Power.

Also new from Program Power for the Acorn Atom is a Dogfight game. The action takes place in the middle of the ocean — both planes operating from off aircraft carriers. The object of the game is to shoot down your opponent

before he shoots you.

There is also a Stock Car race game which offers you 16 different tracks to negotiate.

Astro Warrior is an Asteroids type game in which you have to shoot assorted aliens and travel to far flung fuel dumps to keep your craft moving.

Dogfight, Stock Car and Astro Warrior run in machine code for the Acorn Atom 12K and can be obtained from Leeds based Program Power at £4.95 plus VAT.

WATCH OUT, ALIENS ARE ABOUT!

3D DEFENDER

Seated in the cockpit of your Defender ship you'll witness alien attackers, meteors and scintillating clouds flying head-on towards you.

The ground is also not far below and you must be careful not to crash into the hills.

Armed with photon torpedoes you will score 250 for each direct hit and 50 if you fly low enough to entice an alien to attack you. As the alien onslaught proceeds you must be cautious to keeping your shield strength — set initially at 10 and reduced by one each time you are hit by plasma or meteors, and by two for a collision or crash landing.

Flying controls include a forward radar screen which shows you what to expect to find in view a few seconds hence. A "proximity warning" tells you about imminent alien craft.

This 3D Defender cassette is available from the Bath based firm J. K. Greys and runs on a Sinclair ZX81, it costs £4.95.

PIRATE WITH A VAST EVIL ARMY

WINGED AVENGER

The Winged Avenger has countless Drones and an Invasion Force to send out to do battle with you before he is drawn into the light himself.

The Drones attack relentlessly and their purpose is to soften you up for the more superior Invasion Force. The Invasion Force are the elite of the fleet — and they will fight on to the very end, often necessitating more than one direct hit.

The Assaults also attack in three waves and combine a tendency to fly direct at your missile base — Kamikaze style — with very heavy fire power.

You have limited energy to fire your laser, which is capable of rapid fire, and to power your base shield which will protect

you from flying debris and from those of your opponents who wish to die in a blaze of glory by crashing into your laser base.

If you survive these attacks the Winged Avenger must concede that you are a worthy opponent and will engage you himself. He is armed with powerful Smart Lasers that lock onto your base and are guided for the kill.

Your only hope of vanquishing this seemingly unbeatable space pirate is to damage his central control and force him to withdraw.

Winged Avenger is based on the popular arcade game Phoenix and runs on a Sinclair Spectrum. The game is available from Luton based Work Force at £6.95 inclusive.

ALL THE FUN OF THE FAIR

SHOOTING ARCADE

All the fun of the fair ground on offer in Shooting Arcade one of three new games from Amiga.

You move your gun with a joystick or using the keyboard and then take potshots at the stampeding elephants, waddling ducks, and jumping bunnies.

Bonus points are awarded for hitting smiling faces. But don't mistake a smile for a frown — for if you hit a frowning face you

bullets will turn to blanks.

Shooting Arcade has been imported by Harfordshire-based Audio Video Offers for the Alan 400 and 800. The other two titles from the U.S., Pacific Coast Highway, and Clowns and Balloons are, like Shooting Arcade, available as either a 16K cassette or a 32 disc version, all games and formats costing £20.50 each, inclusive of VAT.

Read this ad

You: "Darling, I've decided to buy a computer."

Her: "***++**?!@XX??££**?!?!? off!"

You: "Yes, I know we could do with a new washing machine. But the new Dragon 32 Computer is much more important. It's the first computer actually designed for all the family - and it costs under £200!"

Her: "***++?!@££?! fortune!"

You: "No, I'm not being selfish. Computers are for the whole family - and they're going to play a big part in the children's future."

Her: "Oh?"

From this point on, the conversation should follow more reasonable lines.

Allowing you to fully explain the many advantages of the new Dragon 32 family computer.

32K RAM FOR UNDER £200*

For a start, the Dragon offers 32K RAM. Your wife may not understand that, so just tell her that the Dragon's capabilities are truly massive - at least twice as powerful as its competitors, with some features you won't find even in more expensive units. The Dragon will give you all the power you're likely to need, and more, to create your own programs - along with

an exciting range of software which can do anything from helping with kids' spelling and arithmetic to creating your own cartoons.

THE FIRST FAMILY COMPUTER.

All of which brings you nicely to the point where you tell your wife just how much fun the kids will have with the Dragon. How it will save her all that

*Television not included in price.

money on those Space Invader machines. How it will magically translate simple typed instructions into beautiful drawings and designs using set, line, circle, draw, scale, rotate and paint features, in up to 9 colours - and play and compose

to your wife.

SPECIFICATIONS
6809E MICROPROCESSOR. Pet, Apple, Atari 400, BBC Micro, and VIC 20 still have the less powerful 6502.
32K RAM (as standard). At least twice the power of similarly priced machines. Expandable to 64K RAM.
EXTENDED MICROSOFT COLOUR BASIC (as standard). Featuring: ADVANCED GRAPHICS (set, line, circle, paint, print, draw, rotate and print using) ADVANCED SOUND 5 octaves, 255 tones. AUTOMATIC CASSETTE RECORDER CONTROL. FULL EDITING with INSERT and DELETE.
9 COLOUR, 5 RESOLUTION DISPLAY
USE WITH ANY U.H.F TV and/or separate P.A.L. monitor
PROFESSIONAL QUALITY KEYBOARD. Typewriter feel. Guaranteed for 20 million depressions.
PRINTER (Centronics parallel).
JOYSTICK CONTROL PORTS.

with 5 octaves of music. How it will engross your children in mind-boggling adventures in dungeons and caves without even getting their knees dirty. And the Dragon works with any U.H.F TV

THEY'LL LEARN AS THEY PLAY.

And then you can casually point out that although the kids are having fun, they're also learning. And within a very short space of time, the whole family will be completely at home with programming - with computer language - with every aspect of how computers work. Which can't do their future prospects any harm at all.

BRILLIANTLY SIMPLE INSTRUCTION MANUAL.

The Dragon is made in Britain, designed with the help of British Universities. And it's also worth remembering

that the Dragon's instruction manual is clearer and easier to understand than any other home computers.

That its top-quality keyboard is as easy to use as a typewriter, and so well made it's guaranteed for twenty million depressions.

TAKE THE FAMILY DOWN THE HIGH STREET.

And if she still wants to know more, take her to see the Dragon 32. It'll soon be available in most good stores - or you can send the coupon for further details.

And if you're one of our many lady readers, please accept our apologies.

Perhaps you'd like to read this ad to your husband.

DRAGON 32

The first family computer.

BIZARRE HEALTH CUTS

MICRO SURGEON

You will finally be able to put the Biology O-level to good use when Imagic launches its bizarre game Micro Surgeon over here.

The patient is critically ill and the game challenges you to undergo a *Fantastic Journey* type mission into the blood stream to save him.

Inside the patient's body, you navigate your way through the bloodstream, out-maneuvring white blood cells that attempt to destroy you as foreign matter.

Your mission is to remove a tumour from the brain, a blood clot from near the heart and nicotine deposits from the lungs. But you must work fast as the patient will die within an hour if the operation is not complete.

Micro Surgeon is one of five exciting releases planned around Christmas time by the US company Imagic through its distributors over here, Adam Imports. These four run on the Mattel Intellivision and go alongside a range of seven Atari compatible cartridges.

Apart from Micro Surgeon there is a version of the popular arcade game Donkey Kong, where you have to scale the outside of a skyscraper to rescue the girl from the clutches of the giant gorilla who is threatening to throw her off.

Just to make things a little more difficult the gorilla also has an inexhaustible supply of boulders which he is tossing down at you. You have to dodge these or, if you're brave enough, squash

them to score bonus points. The player that gets to the top and rescues the girl in the quickest time is the winner.

Swords and Serpents places you in a maze-like dungeon where you have to do battle with Black Knights, dragons, gargoyle, and an army of enemy Knights.

You are befriended by a wizard who you take under your protection until he learns the spells that may help you both escape with the treasure that litters the dungeon.

Demon Attack is a fast and furious space attack game based on the popular arcade game Phoenix.

Atlantis — that mythical city under the sea is under attack from alien spacecraft.

Armed with a single laser gun you are charged with the task of resisting the alien onslaught.

WINGED WARRIORS DEMON ATTACK

The demons are attacking the peaceful planet of Kybor.

Armed with a laser cannon you must defend the planet's freezing surface from the demon hordes which is being showered down on you from the eerie creatures hovering above.

THE WORLD OF TRON

TRON GAMES

With Tron the movie playing to packed audiences across America and soon to open in the UK — TV games centre owners may soon be able to enjoy some action on their own television sets.

First in the field are Mattel with two Tron-based games for their Intellivision machine.

The games are based closely on the storyline of the latest Walt Disney production.

In Deedly Discs you do battle with a variety of computer controlled adversaries who chase you across a black grid. You are armed with an electronic Irisbee — disc which you fling at your opponents — just as in the film. If you score a hit your enemies will disintegrate.

In Tron Maze-A-Tron you must penetrate the Master Control Programme, again just as featured in the film script. Sark —

the evil overlord of the computer will attempt to thwart you, sending out adversaries of the most grotesque kind.

Six other games for the Intellivision machine have now been in the shops since the Summer. Space Hawk, Lock 'n' Chase, Utopia, Frog Bog, Sub Hunt, and Night Stalker.

Worthy of a particular mention among these is Lock 'n' Chase — Intellivision's answer to Pacman.

The game seemed a little slow by comparison with Atari Pacman and the Intellivision direction disc makes steering more difficult than with a joystick but the lock features more than makes up for this.

It enables you to lock off sections of the maze by placing a little red bar behind you in the maze to foil — just as your pursuers home in on you.

Points are scored each time you successfully blast a demon out of the sky.

You are also awarded an extra laser cannon for each wave of demons you manage to survive. The value of the demons increases as you go onto the next wave — up to the 12th wave when Demons are worth 35 points, Split Demons 70, and diving demons 140. From this stage onwards the points remain the same.

The Demon Attack cartridge gives you ten games in all to choose from — some for one and

some for two players.

Games 1, 3, 5 and 7 pit you against progressively more difficult waves of demons.

The higher the game number — the faster and more skilful the demons become.

Games 2, 4, 6 and 8 are two player versions of the above — play alternating between both players. Tracer shots are also featured in the two player versions.

Demon Attack is manufactured by Imagic for the Atari VCS and will be in the shops in October.

S CENTRES TV GAMES CENTRES TV GAMES CENTRES VIDEO SCREEN

RIBBIT, RIBBIT!

FROGGER

The trip to the breeding grounds is life and death to the hopping emblems of Frogger.

A busy highway and a perilous river crossing stand in their way and they have only 30 seconds to reach the home bays.

Frogger is the second cartridge in the range of Atari compatible games from Parker Brothers to be available over

here and it is a very close copy of the arcade original.

Each frog must be guided through five crowded lanes of traffic, hopping between cars and lorries, traveling in different directions at varying speeds.

Then he arrives at the river bank and is faced by a raging torrent, carrying logs downstream while turtles swim up it.

By judging leaps between these he will arrive at his home bay.

But our aquatic leaper must take care not to spend too long on the blue, diving turtles which will dip below the surface and surrender him to the current. On the bright side he could rescue a lady log from the logs and carry her home on his back.

Alligators drift between the logs and their jaws will snap shut on any frog careless enough to leap into them.

Points are scored for every frog safely home and bonuses for those who picked up a lady friend or found a fast fly meal.

When all five log bays are filled a set of new frogs come out to make the trip — only across more crowded roads and with fewer floating objects on the river. But watch out for snakes and alligators on the river banks in the later stages.

Pelitoy markets the cartridge over here and it costs £29.95.

NOW-SOUND AND VISION

SPACE SPARTANS

Space Spartans and Blip Bomber feature the new Intellivoice speech reproduction system which reproduces voices fairly realistically.

The Intellivoice Voice Synthesis Module plugs into the cartridge slot on the Master Component and then the special Intellivoice cartridges plug into this. The speech box costs £69.95 from Intellivision stockists.

The bottle computer — which is the speaking part of the game Space Spartans — tells you how you are progressing and warns of any imminent aliens.

Of the new games available for the Intellivision machine Star Strike was the one that stood out from all the others at a recent Metell toy fair.

It's 3-D graphics are both colourful and vivid. Alien ships buzz around you as the planet earth moves slowly across the screen — within range of the alien missiles.

Intellivision cartridges are available from good toy shops at between £19 and £24 although the new Intellivoice cartridges are slightly dearer at £29.95.

MAY THE FORCE BE WITH YOU

THE EMPIRE STRIKES BACK

Take the controls of a searing snowspeeder to defend the rebel base on Hoth from Darth Vader's imperial forces in this recreation of the fabulous battle from *The Empire Strikes Back* film.

The seemingly indestructible Walker Tanks prove formidable opponents as they plod inexorably closer to the rebels' reactor. Five Walkers, which resemble robot camels, approach the base in single file spitting missiles from their heads and smart bombs from other parts of their anatomy.

It takes 48 hits to destroy a Walker but each series of eight hits weakens and slows it, producing a tell-tale colour change. All five must be despatched before any one of them reaches the reactor which is placed at the end of a radar strip displayed beneath the screen action.

There is just one chink in the Walkers' armour, bomb hatches which flash open on the body and a duct hit on one of these will result in instant destruction.

The snowspeeders are invulnerable in companion, any hit will badly damage them and a

wise pilot puts down for repair at one of the many recovery pits before risking further punishment. Smart bombs are more dangerous than ordinary missiles. They appear with a buzz and chase the snowspeeder around the screen as he flies desperately to outmanoeuvre it or blow it up. They may also destroy the craft with just one hit.

Of course you couldn't have a *Star Wars* game without including the Force — that almost magical quality which enhances human performance — and if you can keep any snowspeeder alive for more than two minutes, the Force is with you for 20 seconds.

During those seconds the snowspeeder is all-powerful and cannot be destroyed, make the most of this period to get in some telling hits.

The Empire Strikes Back is the first of the Parker Brothers range of cartridges to be released over here. We have already received good reports of its reception in the US and it is being distributed over here by toy company, Pelitoy. As we mentioned last

month this range of Atari-compatible cartridges is going to expand rapidly and some exciting titles are promised.

Empire Strikes Back should be in the shops now and costs £29.50.

Probably the fastest microcomputer in the universe

the **JUPITER ACE** only £89.95.

Key Features

- Revolutionary microcomputer language FORTH
- Full-size moving-key keyboard
- User-defined high-resolution graphics
- Programmable sound generator
- Floating point arithmetic
- Fast cassette interface
- Upper and lower case ascii character set
- 24 x 32 character flicker free display

The Jupiter Ace uses FORTH

The Ace is set apart from all other personal computers on the market by its use of a revolutionary language called FORTH. Some computer languages are easy for humans to understand and others are easy for computers. FORTH is most unusual in being both. Its underlying principles are so simple that it takes even a newcomer to computers only a few minutes to learn how to do calculations on the Ace, yet the very same principles are powerful enough to allow you to invent your own extensions to the language itself.

At the same time, the memory-saving coded form used to store your programs inside the Ace allows it to obey them very fast — typically in less than a tenth of the time it would take to do the same thing using a different language. Amongst other things, this makes the Ace ideal for "games".

FORTH's unique combination of speed, versatility and ease of programming has already made it a prime choice for professional applications as diverse as pub games and radio telescopes, and gained it an enthusiastic national user group. Now the Jupiter Ace can bring the addictive language into your own home.

Designed by Jupiter Cantab

Leading computer designers Richard Altwasser and Steven Vickers have a reputation for pushing technology forwards. After playing the major role in creating the ZX Spectrum they formed Jupiter Cantab to develop their latest brainchild the Jupiter Ace.

All inclusive Price

For £89.95 you receive your Jupiter Ace, a mains adaptor, all the leads needed to connect to most cassette recorders and TV's (colour or black and white), a software catalogue and a manual.

The manual is a complete introduction to the world of personal computing and a course in FORTH programming on the Ace.

Even if you are a complete newcomer to computers, the manual will guide you step by step from first principles to confident programming.

The price includes postage packing and V.A.T.

Technical Specification

Hardware

Processor/Memory
Z80A running at 3.25 MHz
8K bytes ROM 3K bytes RAM

Input
40 moving-key keyboard with auto-repeat on every key

Output
Memory-mapped 32 x 24 character display with high resolution user graphics. Output to drive normal UHF TV set on channel 36

Sound
Provided by internal loudspeaker

Cassette
Load Save & Verify at 1500 baud, separate data storage

Software, FORTH

Data Structures
Integer, Floating point and String data may be held as constants, variables or arrays with multiple dimensions and mixed data types

Control Structures
IF THEN-ELSE, DO-LOOP, BEGIN-WHILE REPEAT, BEGIN-UNTIL, etc. may be mixed and nested to any depth

Operators
Mathematical +, -, *, /
Logical AND, OR, NOT, XOR
Comparison <, >, =

Program Editing
FORTH words may be listed, edited and redefined. Comments are preserved when words are compiled

Order Form

The Jupiter Ace is available only by mail order. Please allow up to 28 days for delivery.

Send cheque or postal order with the form to —
JUPITER CANTAB 22 FOXHOLLOW BAR HILL, CAMBRIDGE CB3 9EP

CHESS

CHEQUERED MATES...

The International Computer Chess Association (ICCA) was formed at the second world computer chess championship in Toronto in 1977 and has just celebrated its fifth anniversary. For its first quarter century of history, computer chess managed without any central organisation at all, events being run by eager volunteers distributed sparsely throughout the world.

By 1977 it was evident that a central organisation was needed to administer an activity which was already attracting much larger audiences than most human championships.

The latest issue of the ICCA newsletter includes analysis of all the game of the 12th North American Championship, won as so often by Ken Thompson's Belle. Here is a strong win by Duchess against the Sicilian Defence, from the first round.

White: Duchess, Black: Awit

1. P-K4, P-QB4; 2. P-Q4, The Morra Gambit.

2... P×P; 3. P-QB3, P×P; 4. N×P, N-QB3; 5. N-B3, P-Q3.

White has gained a lead in development at the cost of a Pawn. Although not often played at grandmaster level, White's opening can be a very strong weapon against ordinary mortals.

6. B-QB4, P-K3; 7. O-O, N-B3; 8. Q-K2, B-K2, 9. R-Q1.

Black is now out of its 'book' and makes an immediate mistake (9... P-K4 is necessary).

9... Q-O7 10. P-K3, N-K1; 11. P×P, N-P?

The founding members of the ICCA were simply the competitors in Toronto. Five years later the membership stands at over 500 including a former world champion, Mikhail Botvinnik, with branches in a number of countries.

It has organised a further world championship in Austria and sanctioned a number of other events. Most importantly, the existence of ICCA has given computer chess a respectability with the conventional chess world.

ICCA has just ratified a co-operation agreement with FIDE (the International Chess Federation) and has worked painstakingly for computers to be allowed to enter human tournaments, earn international gradings

Another mistake, which loses a piece. Black had to play the unpalatable B-B3. Now Black's Knight is pinned against the Queen.

12. B-B4.

White threatens to win the Knight by N-K4. Incredibly White is still 'in the book' at this point. After Black's next move, White begins to calculate its moves.

12... N-N5; 13. P-QR3, N-QB3, 14. B×N? (14. N-K4 is better, winning a piece for nothing. Now Black can win another Pawn for it's piece).

14... B×B; 15. N-K4, B×P ch; 16. N×B, Q-K2; 17. Q-R5, B-Q2; 18. Q-R-B1. (18. N-N4 threatening R×B followed by N-B6 ch wins quickly. N-N4 would still win after Black's next move).

18... Q-R4; 19. N-Q6, B-K1; (White's 19th move was a mistake, simplifying the position when he still has many attacking chances) 20. N×B, R×R ch; 21. R×R, R×N, 22. N-B3, Q-B2.

and even to be allowed to enter the human world championship cycle.

It is some indication of their success in raising the overall status of computer chess that there should now be serious debate about whether entering a computer in the world championship is reasonable — not long ago, it would have aroused nothing but laughter.

The ICCA Newsletter — published three times a year — is currently the best source of up-to-date information about computers and chess.

Membership costs 10 dollars (U.S.) per annum and the secretary is Ken Thompson, Bell Telephone Laboratories, Room 2C2423, Murray Hill, NJ 07974, USA.

(Now 23. N-N5 threatens mate and thus wins the Pawn on K6, Black's KBP being pinned).

23. Q-R4, R-KR3; 24. Q-R2, Q×Q ch; 25. K×Q, R-Q1; 26. R×R ch, N×R; 27. K-N3, P-KN4? (weakening his Pawn structure for no reason).

28. N-Q4, P-KR4; 29. K-B3? (P-B4 would show up the weakness of Black's Pawn structure).

29... K-B1; 30. K-K4, P-N5; 31. K-B4, K-N2; 32. K-N5, P-R3; 33. K×P and Black resigned on move 48.

PRESTEL

NEW PATHWAYS...

Have you been through Prestel's GATEWAY yet? That's the latest development on the viewdata scene, and also brings Prestel a bit closer to the more familiar world of micro-computers. It is very much part of the current trend as Prestel starts to offer more to micro users, and as micro manufacturers start adding viewdata interfaces and facilities. Increasingly viewdata will provide a service to micro users.

What is GATEWAY, and how does it fit in? Basically, a GATEWAY is a standard computer concept — that of linking together different types and makes of computer. This is often far from easy, because different computers work in different ways. It is almost unheard of among micros — hardly any of them can be linked together, even ones from the same manufacturer.

The purpose of a GATEWAY is to set up standard rules and procedures to allow computers to talk to each other. This needs to be done at several levels, starting at the fundamental electrical level, and rising through more complex procedural and programming levels.

But once it is done, different computers can send and receive data and programs.

They often use the telephone system to do so — using a special new service called "packet switching" which means that instead of dialling up somebody — or some machine — you send the data off into the telephone system bundled up into the little electronic packets, and the system then directs the packets to their destinations — much like ordinary letters, except that it's all automatic, and at electronic speeds.

INTERACTIVE GAMES

In the last few months Prestel have set up their aide of the GATEWAY, and a handful of other organisations have done their bit. First off the mark was Hatfield Polytechnic, with a GATEWAY into their educational database.

By Peter Linton

The second GATEWAY link was to Baric, who already have a range of games on Prestel. But via the GATEWAY link into Baric's own computer, it's been possible to open up a couple of proper "interactive" games, much more like proper micro games. One is Bulls and Cows also known as Mastermind in which you have to guess a four-digit number. You get some clues if you guess the right number, and or its correct position.

GATEWAY ACTS

On Prestel, a game like that would take thousands of pages to cover all the permutations. In the Baric version, it needs just one page, plus a clever program behind it. The reason why it's cleverer than a microcomputer version we'll look at in a moment.

The other interactive offering on Baric is a biorhythms calculator, showing in graphic form whether you are emotionally, physically and intellectually up or down — or just in the critical inbetween stage.

Other games are likely to appear via GATEWAY soon, as other organisations get their GATEWAY acts together — technically it is fairly complex. Because of the limitations of Prestel graphics and the capacity of telephone lines, they will never be as fast or powerful as the best micro or arcade games. But GATE-

WAY will make Prestel games better — and more fun.

There is an interesting technical aspect in programming such games that you might like to experiment with on your micro.

A GATEWAY game like Bulls and Cows has to be able to handle more than one user at a time — unlike a micro.

There might be 20 or more simultaneous users, all at different stages in the game. While some are thinking about their next guess, others are typing it in.

KEEPING TRACK...

So the first problem is that the program cannot simply start at the beginning, and run through to the end. It has to keep track of every user, what his previous guess was, and which part or segment of the program he should go to next.

That's the fundamental difference between what's called "batch" computing, where you do one thing from start to finish, and "online" computing, where you are connected to a program that is always live, never stops, and takes a large and changing number of users through the program.

Not only that, but the computer may have up to 40 different programs, with dozens of different users all expecting the machine to produce the right answers — and fast.

BE DYNAMIC

How would you write a program that could keep track of different users, what stage they were at, and which program line they should GOTO next?

The answer obviously lies in the direction of a dynamically updated look-up table, which tells the computer where it's at.

It gets fairly complex, but it's a vital aspect of modern computing, and one of the important differences between a micro and a mainframe computer.

Still once you've cracked it you can start work on a GATEWAY into your own micro.

THE FANTASTIC FREAK

TIPS ON TEMPEST

Tempest as we know it today is a freak of design — the original game was intended to be a monster scenario — the cabinets being illustrated with hairy beasts.

Only just before the game was due to go on general release did the designers realise that the Atari video screen would not produce the required monster graphics.

A new format was hastily worked out, the cabinets repainted, and one of the most popular video games of the moment hit the arcades.

Tempest graphics are strikingly distinctive considering the rushed manner in which the final product was conceived.

The game features sixteen different electrical force fields — each inhabited by a series of colourful electrical enemy shorts. You are an open electrical circuit and your task is to electrocute the enemy in a highly charged force field.

Once you have destroyed the enemy in one pattern you are snatched through the centre of the screen and placed in a new electrical field with a new 3D pattern.

Your controls feature a control knob which is rather like the

trimer on a transistor radio — it moves you at great speed around all the open lanes. It is your key to success in Tempest — and you must develop a feel for its sensitive reaction to touch.

The first button is fairly simple. You have an unlimited supply of ammunition so it is advisable to keep up a fairly constant barrage of fire. The Super Zapper must be used selectively as it can only be used twice in any one pattern. The first time you use it it will destroy all your enemies with the exception of the Spikes.

The second time you use the Super Zapper it will only destroy the enemy that it considers to be of the greatest immediate threat.

Your electrical adversaries vary in aggressiveness and cunning — and so the points you are awarded for electrocuting them vary accordingly as well.

Tiniest of all are the Flippers which can flip from lane to lane and move at lightning speed. The best way to deal with these ominous star shapes is to shoot them fast before they reach the end of a lane.

Tankies present little threat in themselves but you still have to pick them off before they reach the top of a lane as they will then

spawn two Flippers if this happens you will have to spin right and fire and then spin left and fire to pick off the two newly born Flippers before they can cause you any harm.

Fuseballs are also difficult to deal with and are the key to high scores — particularly at the higher levels of play. These red, yellow, and blue snowflake structures are difficult to shoot as they change lanes and dodge up and down to avoid your fire.

Fuseballs are worth having at 250 500 or 750 points depending on the level of play. Pulsars can shoot circuit lanes and harm you in a restricted sector of the pattern as it is impossible for you to cross lanes that have been short circuited. Pulsars can only be killed when they are in the process of crossing lanes. Pulsars must be killed at the earliest possible opportunity. They are worth 200 points. Spikes are slow moving enemies worth only 50 points but it is as well to get them early if you can as they can shoot spikes which can cause you problems when you try to move onto a new pattern.

There are basically two types of pattern in Tempest. Patterns that you can spin right round and patterns that you cannot spin right around. In the latter case you must find a safe place at the right or left extremity of the pattern from which you can shoot your trickiest opponents.

Whatever the pattern shape the golden rule is to move and fire constantly. You will not stay alive long in Tempest if you stay in one place.

Skilled players can choose to commence their game at a higher level — there are five entry levels. It is also possible to begin a new game where you left off if you have reached a sufficiently high level as long as you insert your coins within 30 seconds of the previous game ending.

BIRD WATCHING ON THE FAIRWAYS

BIRDIE KING

Take to the fairways of your local arcade and see if you can climb your way round this nine-hole golf course.

There are two balls to keep an eye on in this game. The one which you address with your club on the screen and the "roller ball" which is the only control needed to play it.

The roller ball dictates distance of shot and economy by the speed and direction you run your hand over it.

It is a tricky piece of control which will quickly single out the skilful players. There are nine holes in the basic game with extra holes awarded to players

who notch up under-par scores such as Birdies, Eagles and Albeiroesses, for one, two or three under-par scores. Hence the name of the game.

The hole-in-one player won't have to buy a round of drinks afterwards but he should notch up six extra holes to play.

The beginner must take care to look at the flag, which indicates how the wind is blowing. It is possible for him to go out-of-bounds and forfeit a stroke or ruin his chances by going more than three over par — the machine can be altered by the operator to call a halt when so many strokes over par are

scored by the player. Three is the most difficult setting.

The holes increase in difficulty as the game goes on, but beginners have a good chance of progressing a good way into the game and so learning it.

WE'RE GOING APE OVER TARZAN!

JUNGLE KING

You may not be able to beat the game but at least you can beat your chest in Jungle King.

If the famous Ape-man Tarzan was your boy-for-girl-hood hero be prepared for a few surprises in this video version of jungle life.

For a start there's trouble with

Chester, the silly chimp and his monkey mates just can't seem to stay out of Tarzan's way as he swings through his jungle home.

The last phase of the game sees Tarzan swinging on the lanas that hang from the trees. You must judge his jumps for him by use of a jump button and a four-way joystick. But watch out for those clumsy monkeys.

Having survived this aerial journey between the branches, Tarzan's next task is doing-do, he leaps into the water to take on the crocodiles.

Armed only with a knife and making good use of the joystick and the stab button he swings along under water battling off the crocs and making the most of the available air pockets. Occasionally he will get trapped in an air-pocket and be coaxed helplessly to the surface.

The third stage of the game involves a steep hill and a landslide of boulders falling down it. Tarzan has two choices here, he can either jump over the low bouncing ones or fall flat beneath the higher ones.

The final scenario fulfils Tarzan's worst fears. "Jane, she

captured by cannibals!" And the painted devils are lowering our heroine into the cooking pot too. The cannibals are armed with spears and Tarzan has lost his knife but must try to stay out of range of the spears and jump over the cannibals to perform his rescue.

And then the whole sequence starts again except that things are speeded up with more hazards.

The game comes with a nice line in graphics, jungle noises and beat the chest-type Tarzan roars.

you ability to steer round your opponent. You must draw a complete line with your solid slip stream around the bike which is chasing you.

The Grid Bug test is the most difficult of all. The Grid Bugs are a breed of compensated spiders who swarm down towards you, preventing your entry to the transporter, which will take you safely on to the next challenge.

The fourth challenge, Tank Chase, incorporates a Pacman type maze. You steer your tank through the maze seeking out your opponent et who you then fire — using the Tron aim control to turn the gun turret.

themes from the film.

The Cone Challenge is based on Tron's attempt to get into the MCP — the computer's nerve-centre — before he can destroy it.

You have to rise up through the cone shooting out all the colorful bricks which appear — one after the other, to block your way. If you touch any of these bricks on your way up you will be "de-rozzed" Tronology for being killed.

The Light Cycle is a test of your speed of reaction and of

Illustration: Peter Brown

Hot on the heels of Mt and Mis Pac-Man-Bally's adaptation of a video game theme — comes a true pinball/video combination called Caveman.

Gottlieb are the people behind this innovation in pin-table design which features a video screen within the playfield. It's "The best of Both Worlds" as the publicity blurb says.

You have to trap the ball in one of two special channels before you'll get a crack at the video game feature. This is a maze type game which shows a caveman chasing various dinosaurs. But he in turn is pursued by a killer Tyrannosaurus.

If this killer beast catches you, caveman the ball drains and the pinball is back in action.

There is a joystick attachment at the front of the table which is used to direct the caveman around the maze when the video is activated.

Hitting targets on the table also affects play in the video game maze. Hitting drop targets and rollovers will replace Tyrannosaurus with bonus scoring Pterodactyls in the video maze. Hitting the vari-targets determines how long these flying horrors stay on the screen.

Gottlieb hope that this combination will make video players take a look at pinball — and pinball players at video games.

We'd like to tell you a bit more about the game — but the table has proved difficult to track down. Gary Flower of the Pinball Owners Association says one member has reported a sighting of this intriguing pin — maybe someone out there has played on one? How about letting us know what you thought?

YOU'VE SEEN THE FILM

ARCADE TRON

Tron — the new science fantasy film from Walt Disney Productions takes place — in case you don't already know by now — inside a computer. The hero of the film is challenged to fight for his life in a series of video style games.

Arcade Tron is manufactured by Bally Midway and goes on general release in the UK this Autumn to coincide with the release of the film.

The game is already a big success in the United States. A nationwide competition has already been played. The chimp clocked up more than a million points in a marathon eight hour game.

The controls are fairly simple. You have a Gorf type joystick — which you can grasp firmly in your whole hand, using your index finger to fire. You also have a knob which can turn Tron's aim through 360 degrees. There are four levels of play — all based on

SPACE WATCH

U.F.O. sightings have been reported over a large area and the evidence is piling into Space Watch headquarters.

You are in charge of the search teams which must be sent out to try and find the aliens before a similar agency from a foreign power can contact them.

The alien sightings are the clue to how they can be tracked down and the code (a sort of Close Encounter sounds sequence, except that it is in colour) which must be used in making contact.

There are five alien craft in the vicinity and the information you have so far received has limited you to give each craft a name.

The Mothership is always the same colour as the Watcher and appears in the centre of the screen.

The Chaser is so named because of its speed, it flies rapidly across the boundaries of the land but never deviates from a straight line flight path.

The Hoverer also follows a straight flight path but is slower, travelling just half a sector each turn compared to the Chaser's whole sector.

The Watcher pursues a circular path either one or a half sector at a time.

But the enigmatic Destroyer follows no fixed route although it does seem to reveal just half a sector at a time. This craft is the most easy to confuse in sightings as it may sometimes copy the flight patterns of the Hoverer and Watcher craft.

The aliens are wary of humans, and unless contact is made quickly there is a very real fear that the Destroyer will live up to his name.

The aim of the game is to find the alien code of five colours and put them in the right order you will then be able to make contact.

Each search you undertake can be across, one sector, four sectors or 16 sectors of the board. But each search empties your energy reserves and when these drop below six the Destroyer will move in to try and blow you out of Space Watch H.D.

Each search is also given a colour code. And only that colour of craft will show up. If you key in red (2), only a red craft will show on your radar scan. All others will remain invisible. You will also be able to see which areas your opponent is searching and whether he finds any craft.

When you think you know the code of each craft you can try out your guess. Inputting the information in the order: Mothership, Chaser, Hoverer, Watcher, Destroyer. So, discovering which of the craft you are tracking, is vital.

There are a couple of other twists a red craft will not show up on a red background. And if you see the Destroyer moving close to you City HQ (marked with a "1" and "2" for first and second players) you can expend energy setting up a defensive screen around the HQ.

The game starts with UFO sightings coming in from the cities and these usually indicate the tactics for the rest of the game.

RUNS ON A ZX81 IN 16K

Why not dip into the Oxford English Dictionary and see what you can find? The war of words? This game is for people who are interested in the history of the English language. It is a sort of crossword puzzle.

MINING COLONY

Out in the depths of darkest space there is an asteroid mining colony plundering the riches of the universe. The miners dig up minerals which are turned into products like solar powered washing machine back on Earth.

But the colony is running low on supplies. The robot ships are on their way — but an asteroid field blocks their flightpath. Your job is to act as an air traffic controller and guide the supply ships through the asteroids and down on to the planet.

The ships are controlled from Atom flight command by using the CTRL key to move left and the SHIFT key to move right.

RUNS ON AN UNEXPANDED

ACORN ATOM

BY ROBERT CAMPBELL

ingenious!

Genie I and II accessories

PRINTERS

The EG 3085 is quiet, fast and efficient. Prints up to 100 characters per second and printing is bi-directional at 80 or 136 characters per line. Suitable for use with other systems, it has three typescripts, adjustable pin or fraction feed and single sheet or roll paper facilities. £425 plus VAT.

If you don't want to pay that much for a printer, consider the EG 603. It doesn't match the EG 3085 in certain areas, but you will still get 100 c.p.s. bi-directional, a range of character styles, forward and reverse feed and pin/fraction feed, with 96 characters and 64 graphic patterns. £235 plus VAT.

MONITORS

Available in 9" and 12" sizes, with white, green or amber display, Lowe A.V.T. monitors are sturdy, attractive, easy to operate and feature an easy view screen with smoked anti-glare display filter. Compatible with most popular micros on the market. From £75 plus VAT.

EQUIPMENT COVERS

Beat the dirt, coffee spills and sticky fingers when your computer and monitor are not in use with these top quality black leather covers.

Genie CV1 £5 plus VAT.

12" monitors CV6 £6.20 plus VAT.

9" monitors CV3 £4.20 plus VAT.

DISK DRIVES

If you want fast, reliable program storage, true random access file handling and access to many computer languages, we can meet your needs. The EG 400T provides storage of up to 184320 bytes per floppy disk and comes complete and tested, in a stylish colour matched cabinet. £220 plus VAT.

The EG 401 AT offers dual disk drive with 368640 bytes of useable storage and comes complete with a power supply ready to connect to an expander box. £365 plus VAT.

DOUBLE DENSITY ADAPTOR

Allows the use of standard minidisk drives in double density, with virtually double the storage capacity. The EG 3021 is equally at home in the Genie or TRS-80 expander boxes.

A double density disk operating system will be needed, such as smallDOS, provides £72 plus VAT.

EXPANDER BOX

The updated EG 3014 expander box allows for up to four disk drives with optional double density. It connects to a printer, or RS 232 interface, or S100 cards. Not bad value at £190 plus VAT (16K version) or £200 plus VAT (32K version).

*The EG 3014 will work with TRS 80 by using the EG 3023 Tandy Adaptor.

TECHNICAL MANUALS

Full technical details of Genie Hardware (all you ever wanted to know about Genie).

Genie I/II Technical Manual

£10 - No VAT.

Expander and accessories (EG3014)

£10 - No VAT.

smallDOS

Powerful, yet reasonably priced, the Genie smallDOS contains 21 library commands, 7 utilities, LBASIC, disk basic and bags of information, including a reference manual and 40 page beginners guide to disk usage. £35 plus VAT.

HIGH RESOLUTION GRAPHICS

Increase graphic resolution capabilities on your Genie seventy-three fold with the LE18 HI-RES unit. It offers bit image graphics of 73,728 points, a resolution of 384 x 192, and uses a separate 16K of video memory to achieve its resolution. Graphics are interchangeable with text or existing pixel graphics, and animation, reverse video displays and use of programmable graphic characters are possible. £86 plus VAT.

GENIE MONITORS

Two good performance, low priced 12" monitors, either to match your Genie or compatible with a wide range of other systems. Good resolution and band width and, of course, they free your television set for the other type of programmes you like to watch!

The EG 100 12" in black & white costs £69 plus VAT.

The EG 101 12" with green phosphor is £79 plus VAT.

GALAXIAN COLONY II

Message to Earth Defence Command. Priority One. A new breed of Galaxians are lavaging earthspace. It appears they are attempting to colonize this planet. They must be stopped at all costs. Alert defence forces immediately.

The only way pilots can destroy these aliens is collide with them. But our intelligence service reports that these aliens transform

at random into construction machines on entering earth's atmosphere with an alien after it has transformed will prove fatal.

These aliens must not be allowed to penetrate earth's defences. The outcome of a landing by even one of the attacking force could be disastrous for mankind. I repeat they must be stopped at all costs...

Are you ready for

Cosmic guerrillas

It is totally different from any other arcade type game for the action is in two entirely different sections of the screen at the same time. Just like the real arcade game of the same name.

And it is fast. Very fast. The speed of both the bombs dropping and your own firing requires quick responses indeed.

The aim is to protect your two bases in the middle of the screen from guerrilla attacks. This is hard, for they come at you from both sides of the screen at the same time, knocking out and removing your defences until they get the base. You defend by firing at the guerrillas as they attack. Not so easy though for they rain down bombs whilst moving across. Then there is the high flying attacker bombing you as well. And if this isn't enough, there's a low flying attacker too which keeps changing direction when you least expect it.

That's not all for the guerrillas not only move randomly across the screen but at random speeds as well. Which means whilst you may be busy tracking one embold across, another will suddenly zip away at your defences.

For once and for all the problem of levels of play has been solved. Cosmic Guerrillas simply gets harder and harder until eventually you are not fast enough anymore. Sound of course.

A sensible **£9.50** Vat and post paid

RUNS ON A VIC-20 IN 3.5K
BY SHAWN SOUTHERN

HUNGARIAN

SQUARES

Illustration: Debbie Clarke

More puzzling than that Cube, more colourful than a trip into hyperspace — that's the Hungarian Squares!

On your screen appear two multicoloured squares. Look carefully and you'll see that each of the two large squares is made up of several smaller coloured squares. The idea of the game is to manipulate the smaller squares to create two big squares of alternating colours. Or you can simply create your own patterns — which might just be easier!

The program is fairly simple, making use of CALL GCHAR and CALL HCHAR, which are the TI equivalent of PEEKING and POKING the screen display, respectively. The screen is 32 columns wide and 24 lines deep. CALL GCHAR and CALL HCHAR use the format:

(ROW, COLUMN, NUMERIC VARIABLE)

where the numeric variable is the ASCII code of the character

CALL KEY is the equivalent of INKEY or GET— CALL KEY(O,A,B) will return the ASCII value of the key pressed to variable A. B is 0 if no key is pressed.

CALL CHAR defines the characters and CALL COLOR their colours. Numeric arrays are used to hold the screen position of each of the small squares — numbered from 1 to 20 from the top left corner of each large square and counting clockwise.

Thus program occupies under 4k of memory, but requires 4.8k to operate in. Those arrays take up a little room.

SHARP DEFENDER

RUNS ON A SHARP MZ-80K IN 14K

BY BASIL ZIMMO

Can you defend the inhabitants of an alpine planet from destruction at the hands of alien kidnapers?

In Sharp Defender you are at the controls of a spacecraft flying across mountainous terrain with a mission of protection ahead of you.

The aliens enter from the right, firing and dropping bombs to try and pick off their prey from one of the mountain peaks.

You can judge their approach

on the radar screen and try to dodge their fire and pick the kidnapers off before they can get alien claws into human flesh.

Your task is made more difficult by the antics of the planet's inhabitants, who seem to come from mountaineering stock and climb the peaks regardless of the peril they put themselves in.

If an alien lander reaches his prey or manages to hit your ship, then you lose a life. After three

lives the game is over.

Basil Zimmo has produced a very neat graphical representation of the popular arcade game and although it is written in Basic it still proves difficult to excel at.

There are several good presentation touches and the game comes complete with a range of sound effects.

The control keys are: W = up; X = down; A = left; D = right; S = fire; H = hyperspace.

A GREAT 16K CHESS GAME FOR YOUR ZX81 OR SPECTRUM

ZX CHESS II

A new improved version with a faster response time, seven levels of play, analysis option and in addition a recommended move option. £9.95

ZX CHESS I

Very popular machine code program, with six levels of play and an analysis option. Available for ZX81. £9.50

PLUS! ZX 1K CHESS
An inviolable game in 1K for only £2.95

ZX81 ARCADE GAMES

NEW

- DOBBELMAN — Escape from munching ghosts, fossil power, dots and man's groats. Up the groats. Similar to classic arcade game. £3.85
- NAMBIT RACERS — High speed, quick action arcade game with four separate groups of vehicles. £3.85
- GALAXIANS — Exciting space exploration and planetary raiding. £3.85

NEW

- UTILITIES TOOLKIT — Nine powerful new functions for your ZX81 including no number line, tape, gas, program, margin, string finding and replacement. £5.85
- SPEC 800 — A 30 in machine code tool and assembler for your ZX Spectrum. £8.85
- ASSEMBLER — Full featured assembler and monitor giving an extremely powerful tool for writing and running machine code programs on your ZX81 and Spectrum. Includes user manual. £9.85
- ZX 800 — A 30 in machine code monitor and assembler for your ZX81. £8.85

LOW COST ADDITIONAL RAM PACKS

- 4K Ram Pack £29.50
- 32K Ram Pack £38.95
- 64K Ram Pack £44.85

ADVENTURE GAMES

JUST RELEASED

ESPIONAGE ISLAND

(Adventure D)

Write on a racine, solve mission, your plane loses control and you are forced to land. Can you survive and escape with the island's hidden secret? £8.00

PLANET OF DEATH (Adventure A)
You find yourself at the end of an inhabited alien planet. Can you reach your ship and escape? £5.00

INCA CURSE (Adventure D)
In a jungle clearing you come across an ancient Inca temple. Your mission is to enter, collect the treasure and escape alive. But beware! Includes a cassette save routine. £8.00

SHIP OF DOOM (Adventure C)
You are unavoidably drawn to an alien cruiser. Can you reach the control room and free yourself? Or will they get you first? Includes a cassette save routine. £7.00

ZX FORTH
Supplied on cassette with editor/cassette user manuals and keyboard overlay. ZX FORTH combines the simplicity of basic with the speed of machine code all for only £35.00

RUNS ON A BBC MODEL A IN 16K BY TERRY ALLEN

There's a rainbow hidden inside your BBC micro — can you crack the code and bring a little colour to its circuits?

The computer selects four colours from a choice of six — red, green, yellow, blue, magenta and cyan — and hides them in four locations. You have to guess what four colours the computer has chosen and in what order they are held.

You get eight attempts to solve the puzzle. Each time you make an attempt the computer will tell you how many of the colours you have got right and how many you have placed in the correct position. As you may have already guessed this game is similar to that famous hoard game Mastermind.

The computer's choice will be revealed at the end of each game. Instructions on which keys to use are included in the program.

Will you be able to find your way over the rainbow?

TROUBLE FREE PROGRAMMING FOR ONLY £13.95 INC VAT (+£1.40 p/p)

WITH THIS BACK-UP RECHARGEABLE BATTERY PACK AND MAINS FILTER.
NO MORE PROGRAMME CRASHES DUE TO MAINS FLUCTUATIONS AND TRANSIENTS

If you use or programme computers you know the frustration and problems caused by sudden drops in the mains supply or high voltage transients. Hours of tedious programming can be lost in a fraction of a second.

Here at Adaptors and Eliminators, who are one of the largest suppliers of mains adaptors to the computer industry, we have developed this rechargeable battery pack and mains filter.

* No more programme crashes due to mains fluctuations.

* In the event of a power cut your computer will run for up to 30 mins, allowing you to record your programme on a battery cassette, or print a hard copy on your printer.

* The battery pack is also a useful source of 9V power, for use on radios, tape recorders etc. use your adaptor to charge overnight.

Operation could not be simpler. Plug the lead from your ZX adaptor into the socket on the battery pack (male or female are provided). Then using the lead supplied connect the battery pack to your ZX computer or Spectrum.

The battery pack then provides a instant back up to the adaptor, leaving you to programme without fear of crashes due to the mains (Poor mains supplies are responsible for about 90% of all programming faults)

The pack is housed in a smart ABS case and comes complete with full instructions. No wiring required — just plug it in! We urge you to protect your programmes.

Order now — only £13.95 + p.p.

Please Note. This pack is suitable for all computers using a 9V supply but you may need to change the plugs.

FOR TROUBLE-FREE COMPUTING ORDER NOW. MAIL ORDER ONLY

Adventure

FLAWED MASTER- WORK

You have written your masterpiece, and the first Adventurer to receive his cassette from your software house starts to play. Eventually he is confronted by a problem which you consider to be one of your more brilliant touches! Until he types in the necessary sequence of commands, he can go no further.

What you assumed was an obvious solution given some thought, is too obscure for your player and he is now hopelessly stuck. What is worse, he is becoming bored and about to tell all his fellow Adventurers so. How can you, the author, avoid this?

Ask some friends round to have a go at your Adventure while you are still writing it. Not everyone has a mind bent towards the kind of thinking needed to play Adventure, so you must select your guinea pigs carefully!

Invite them one at a time as you will want to see how they react individually. Sn with them and make a note of each problem with which they have unreasonable difficulty. Now you can decide where extra clues are needed.

The most direct way to introduce these is for each clue to be a response to the word HELP. Let us look at an imaginary example.

Consider the garden in which last month we grew a beanstalk. The garden was location no.4, a spade, bean and bucket were objects 5, 9, and 12 respectively. If the bucket is empty the flag G(12) will be 2. Figure 1 shows a series of possible steps in the player's logic, and a suggested response from the computer to the command HELP.

If control passes to — say — line 4400 when HELP has been decoded by the reply decoding routine, then: 4400 ON LN GOTO 4100,4200,4300, 4400,4500

will access a different HELP routine for each location. (Each problem will be location dependent.)

Here the location is 4, so control will pass to line 4400.

4400 IF C(5) = 2 THEN LET Q1\$ = "NEEDS DIGGING": GOTO 100

Arranging for C(5) to be increased to 3 when a hole is dug, we can continue:

4410 IF G(5)=3 THEN LET Q1\$="HOLE IS BEAN-SIZED":GOTO 100

4411 REM GOODNESS! HASN'T HE FOUND THE BEAN YET?

As C(5) is again increased by 1 when the bean is planted, we can use this fact not only in the PLANT routine, but also for HELP:

4420 IF C(5)=4 THEN LET Q1\$="GROUND IS VERY DRY": GOTO 100

4421 REM YES — IT WILL NEED

WATERING! WHEN DONE C(5)=5
4430 IF C(5)=5 THEN LET Q1\$="SOMETHING AT THE TOP":GOTO 100

4431 REM GLIMB IT FOR HEAVENS SAKE!

4440 LET Q1\$ = "SORRY I GANT": GOTO 100

C(5) will be increased to 6, and therefore this line will execute by default when the beanstalk is chopped down later.

Finally, all the IF statements can be avoided by the use of ON. GOTO:

4400 ON C(5)-1 GOTO 4105,4410,

4420,4430,4440

4405 LET Q1\$ = "NEEDS DIGGING": GOTO 100 ... etc.

FIGURE 1

PLAYER'S ACTION	PLAYER THINKS	REPLY TO HELP
Arrives in garden	Oh! A garden! What do I do?	Needs digging
Finds spade, goes into garden, digs	Hettot a hole! What use is it?	Hole is bean-sized
3 months later, finds bean & plants it in hole	How disappointing Only a beanshoot	Ground is very dry
3 months later, finds water & bucket, waters beanshoot	What on earth can I do with a huge beanstalk?	Something at the top

The date is April 2nd 1913. A telephone in your Scotland Yard office rings. "Inspector Strade here. There's been a murder at Crowley Manor." So the mystery starts.

By two word commands you find yourself on the street, there's no alternative. You seem powerless but to follow the plot. A handsome cab pulls up. The driver smiles at you. Nothing to worry about, he is just trying to lure you to take his cab to Crowley Manor.

Now I'm the awkward type and did everything I could to avoid using that cab. But eventually I had to let events overtake me.

I was convinced that the game was going to solve itself, but it was not to be.

After stumbling over a body end slipping on something slimy, I found the game became quite difficult — mainly due to the inconsistency of the form of the commands recognised.

The worst offender was a hole I

wished to traverse. After I gave up, Nell, my 14 year old son tried out his American on it — CLIMB THRU HOLE — and succeeded! I was so frustrated I left him to solve the mystery!

The Curse of Crowley Manor runs on a TRS-80 and Video Genie in 16k, and is obtainable from Callisto Computers.

Savage Island Part Two starts where Part One left off, and for me doesn't go much further — yet! A neon sign proclaims: "Part 1 will seem like a piece of cake compared with what you are about to go through!"

That sign is difficult enough to get to! Can anyone help?

Not having played Golden Voyage, Scott Adam's latest, I was unable to offer any advice to a desperate reader who contacted me recently. Intrigued, I had a go, and would now put money on where he is stuck. Please "STEP UP" Mr Reader and tell me if I'm right!

By KEITH CAMPBELL

KAYDE Electronic Systems Ltd ZX KEYBOARDS FULLY CASED

ZX81 WITH REPEAT KEY

By 1985, the ZX81 was the most popular home computer in the world. This is the first time a repeat key has been added to its own line. It is a highly professional keyboard, which will be available in the near future.

Sinclair ZX Spectrum

**16K or 48K RAM...
full-size moving-
key keyboard...
colour and sound...
high-resolution
graphics...**

**From only
£125!**

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power – personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM), 16K of RAM (which you can upgrade later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232C/network interface board.

ZX Spectrum

Key features of the Sinclair ZX Spectrum

- Full colour – 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound – BEEP command with variable pitch and duration.
- Massive RAM – 16K or 48K.
- Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set – with upper- and lower-case characters.
- Teletext-compatible – user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair t6K extended BASIC – incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

rum

RS232/network interface board

This interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only £20 is possible only because the operating systems are already designed into the ROM.

ZX Spectrum

**Available only
by mail order
and only from**

sinclair

Sinclair Research Ltd,
Stanhope Road, Camberley
Surrey GU15 3PS
Tel: Camberley (0276) 685311

The ZX Printer— available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set—including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive— coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

Each Microdrive is capable of holding up to 100K bytes using a single interchangeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.

How to order your ZX Spectrum

BY PHONE—Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. **BY FREEPOST**—use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard,

Access or Trustcard. **EITHER WAY**—please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt—and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

COMPUTER & VIDEO GAMES BACK ISSUES

Look what you've been missing! Games programs for your favourite machine, news and reviews of those games tapes you've always wanted to know about, plus special features on the latest trends in the exciting world of computers and gaming.

If you would like to catch up on what's been going on in the pages of Computer and Video Games over the past months why not send off for some back issues? It's easy to do.

Just send details of the copies you want with your name and address, plus a cheque or postal order

made payable to Computer & Video Games to C&VG Back Issues, Competition House, Fardon Rd., Market Harborough, Leicestershire. Each issue costs £1 including post and packing.

EASIBINDERS

Quick, neat and easy!

It's so easy and tidy with the Easi-bind binder to file your copies away. Each binder is designed to hold 12 issues and is attractively bound and blocked with the COMPUTER & VIDEO GAMES logo. Price U.K. £4.25 including postage, packing and V.A.T. Overseas orders add 25p per binder.

Nat. Giro No. 5157552.

Please allow 3/4 weeks for fulfilment of order. Payment by ACCESS/BARCLAYCARD/VISA. Send coupon below detailing credit card no. and signature. Why not place your order now? Send the completed coupon below with remittance payable to:-

Easibind Ltd., 4 Uxbridge St., London, W8 7SZ

WE PROUDLY PRESENT, FOR THE BBC MICROCOMPUTER (MODELS A & B)

THE INTERNATIONALLY SUCCESSFUL

MYSTERIOUS ADVENTURES

These superbly written, 16k Machine Code Adventures have been enjoyed by TRS80/VIDEO GENIE owners in Britain for well over a year now and are currently taking the U.S. by storm. The Author has now implemented these absorbing programs on the BBC Microcomputer.

ALL ADVENTURES IN THIS SERIES INCLUDE -

Split screen display, Ultra fast Machine code response, Save game to Cassette feature, simple two word command entry, approx. 70 Locations to visit, 30 Objects to manipulate, 20 or more "problems" to overcome.

ADVENTURES PRESENTLY AVAILABLE -

1). THE GOLDEN BATON - Venture into a strange province of danger and evil magic to retrieve the stolen Baton of King Feriandil.

2). THE TIME MACHINE - As a newspaper reporter you have been sent to the old house on the moors to investigate the eccentric Dr. Foster.

3). ARROW OF DEATH (Part I) - In the first part of this epic Adventure you must find and destroy the source of the evil blight which has befallen your homeland.

These are the first three of a series which should ultimately total more than 20 Adventures.

WARNING! - Only supreme courage and low cunning can ensure eventual success on these dangerous missions!

Available soon for ZX Spectrum, ZX81 (16K), Apple II, Atari 400/800.

Graphics

MATHS IS ALL YOU NEED...

One aspect of computer graphics that seems to concern many of the people interested in it is the idea that it is necessary to know a good deal of mathematics.

To see how much mathematics it is necessary to know in order to generate useful graphic displays on a microcomputer it is useful to examine the way in which the user is producing them.

In terms of the mathematics to be used, the two extreme positions are those of the programmer who writes all his own graphics software to generate the displays he wants on his system, and that of the person who simply uses an existing program as a tool for making the displays he wants for his own purposes.

If we examine these extremes, the writer of a graphics program must know all the mathematics necessary to achieve his effects because the mathematics must be built into the program itself.

The basic area of mathematics that is called on is, of course, geometry. Two-dimensional geometry is studied at school by most people, and is found as simple as anything in mathematics by most people simply because it can be treated in a pictorial way.

Three-dimensional geometry is usually found to be a good deal more difficult mainly because the visualisation of solid objects and shapes is not easy for most people.

Other mathematical techniques include the calculus and matrices. Since the use of the matrix is included in all modern maths syllabuses, this is an area that is familiar to many. More sophisticated forms of geometry that are of great value are differential geometry and homogenous coordinate geometry.

The graphics programmer writes programs for the user at the other of our extremes who simply uses existing programs.

Such a user needs to learn how to run a particular program: he needs only a qualitative and mathematical appreciation.

Learning to use a graphics program may not require an entirely negligible effort, but it is clearly a far simpler task than mastering the mathematics that went into the writing of the program itself.

Programs that can be used in this way have been written for applications that include generating and storing screen displays for later incorporation in other programs, such as games, and computer-aided design programs in which a graphic display enables the user to examine the results of his design efforts.

Programs for displaying three-dimensional shapes can have many uses, notably in education, but also for example, for use by architects to display models of buildings in the planning stage to their clients.

Another way to produce graphics which requires the use of no mathematics at all is to use a graphics tablet such as is available for the Apple and Atari machines.

With such a device, shapes can be entered into the computer by

tracing them on the digitising surface of the tablet or by building them up with lines in the ways provided by the menu of commands possessed by the tablet and its software.

The number of graphics input devices for microcomputers is increasing: at the recent Pet show a digitiser that is usually used with mainframe computers was shown interfaced to a Pet. Also, more graph plotters are available for micros, so that graphic results can be saved in permanent form.

In between the two extremes it is necessary to be familiar with a certain amount of mathematics to amend graphics programs that do not do exactly what you want. To make the change it is necessary at least to understand the mathematics incorporated in the relevant routine.

So the answer to the application "How much mathematics do I need for graphics?" is that you need quite a lot to write your own graphics programs, that a little, at least, is needed if you need to modify graphics programs, but that none at all is needed if you are content just to use some of the many fine graphics programs that are available.

PRACTICAL PROGRAMMING

FAST THINKING THE QUICK WAY

When entering programming competitions like Beat the Bugs it is useful to make an early impression on the judges by giving your program a fast solution time.

Thus month I am looking at methods for making programs run faster. This is because I have recently bought a Spectrum and, although I am generally happy with it, it is much slower than the CompuLink I am used to.

Although computers can perform simple calculations with no noticeable delay, the calculations do take a finite time and when there are thousands or millions of calculations to be done it may be necessary to reduce the delays.

The main reason for needing to speed up a program are moving graphics that must move smoothly instead of jerkily and to cut down the waiting time in "number crunching" programs that take hours or days performing millions of calculations to solve a mathematical problem.

There are several simple methods of speeding programs by taking advantage of the way the Basic interpreter works. Consider programs (1) and (2) below:

```
(1) 300 FOR I = 1 TO 1000
    210 GOSUB 500
    230 NEXT I
    230 STOP
    500 RETURN
```

```
(2) 200 FOR I = 1 TO 1000
    210 GOSUB 500
    220 NEXT I
    230 STOP
    300 REM
    310 REM
    390 REM
    500 RETURN
```

Tuning these on the Spectrum gave 7.5 seconds for (1) and 8.5 seconds for (2).

The reason the second program takes longer is that when line 210 is

executed the Basic interpreter searches for line 500 by looking through the whole program, starting at the beginning and checking each line number until it finds the line it is looking for. We can see from this that a program will run faster when the most frequently used subroutines are placed near the beginning of the program.

If the saving in speed due to having subroutines near the beginning of the program is really significant the program could be laid out as follows:

```
10 GOTO 500
100 REM Most frequently used
    sub-routine

190 RETURN
200 REM Next subroutine

500 REM Main Program

...
```

The interpreter will handle GOTO in the same way as GOSUB, searching through the line numbers until it finds the one it is looking for, and it is possible to speed up a program by arranging for the destinations of GOTO statements to occur near the beginning of the program.

REM LINES AND FOR, NEXT LOOPS

Although it is good practice to include plenty of REMarks in a program to explain what it is doing, the program will run faster without the REM lines and if the extra speed is essential these lines can be deleted from the final version.

It is also faster to use FOR...NEXT loops than IF THEN GOTO. Comparing programs three and four:

```
3) 10 FOR I = 1 TO 1000
    20 NEXT I

4) 10 LET I = 1
    20 LET I = I + 1
    30 IF I <= 1000 THEN
        GOTO 20
```

program three takes 4.4 seconds, while program four takes 8.2 seconds.

A simple counting loop as in program four would normally be written as a FOR...NEXT loop in the first place. However, where a loop would normally be written with IF...THEN GOTO, there are tricks we can use to replace the loop by FOR...NEXT. For example, suppose we have 110 (start of loop) 190 IF A < B THEN GOTO 110 we could eliminate the slow GOTO by writing 100 FOR I = 1 TO 1 STEP 0 110 (start of loop)

```
190 IF A = B THEN LET I = 2
200 NEXT I
```

Because we have STEP 0 in line 100 the FOR...NEXT loop would not normally finish but when A = B in line 190 the value of I will be changed to a value greater than the upper limit of the loop and the loop will then finish.

Another method of speeding up programs can be seen from the following example:

```
5) 10 LET A = 0
    20 LET B = 0

    80 LET H = 0
    100 FOR I = 1 TO 1000
    110 LET A = A
    120 NEXT I
```

6) replace line 110 in (5) by 110 LET A = H

BY TED BALL

PRACTICAL PROGRAMMING

Program five takes 7.9 seconds, program six takes 8.5 seconds.

The reason for this difference is in the way the variables are stored inside the computer. The Basic interpreter maintains a table of the variable names and the current values of the variables, and whenever it comes across a new variable name it is added at the end of the table. When the interpreter needs to use a variable it starts looking at the beginning of the table and works through until it finds the name it is looking for. Thus, in program (5) the "A" on the right hand side of the assignment was found on the first check, but in (6) the interpreter had to go through "A", "B", "C", until it came to "H".

FACT AND FICTION ABOUT VARIABLES

You may read in some places that using variables instead of numeric constants will make a program faster. This is true in Microsoft Basic, used on the Pet, Apple, CompuKit, and many other computers, but it is not true in Sinclair Basic, used on the ZX81 and Spectrum. Consider program (7), obtained by replacing line 110 in (5) by

```
110 LET A = O
```

On the Spectrum, program seven takes 7.7 seconds, and is thus faster than five and six; however on the CompuKit the times for programs five, six and seven are 2.7 seconds, 3.0 seconds and 3.3 seconds respectively (you can see from these comparative timings why I am not happy with the speed of the Spectrum).

The reason that variables are faster than constants in Microsoft Basic but not in Sinclair Basic is the way the program is stored in the computer. In Microsoft Basic a constant is stored as the character codes for the individual digits and the string of character codes is converted to a binary number every time the constant is used; the conversion takes longer than looking up the variable table to find the value of a variable, which is stored as a binary number.

In Sinclair Basic, however,

*The Best

thinking!*

K

BRIDGE

When panels of bridge experts are usually divided on the best way to play any given situation, what hope is there for the poor bridge programmer of teaching his computer the best responses?

Most bridge magazines run a bidding competition with a panel of experts tackling perhaps 10 bidding situations. The trouble lies in the fact that there is only a majority vote on which to base marks for the competition—it is not at all unusual for a panel of 24 international experts to share their votes over five or six possible bids!

Another type of problem approximates to the "over-the-board" (horizon effect) that you find in chess circles—in bridge you are given declarer's hand and dummy, the opening lead and any opposition bidding and are invited to find the best line of play. Sometimes bet really

BY ALAN HIRON

you are told that there is a 100% play (a "sure tricks" hand); sometimes you are just required to find the best percentage play.

These are the problems that the existing bridge computers are geared to attempt. Not very efficiently, as we have seen, but they do try and cope.

Finally we have what is called a double-dummy problem. Strictly speaking the name is something of a misnomer for you are shown all four hands, told the lead and the contract and invited to find the winning play that succeeds against any defence. Frequently some cards have already been played and you may be required, say, with seven cards in each hand remaining, to make six out of the last seven tricks.

So how does a computer cope?

lead, there are no trumps and he has to make two of the last three tricks."

	S 8 7 6	
SKJ 10		SS 4 3
	SA O 9	

You got there I hope? South must lead S9. West has to win and now South makes the last two tricks. Clumsy by human standards for no other play succeeds unless West does something silly. What about an exhaustive search? It is not too difficult here: as all of the cards are spades, the possible plays to trick 1 are $3 \times 3 \times 3 \times 3 (=81)$ in number; there are $2 \times 2 \times 2 \times 2 (=16)$ play to trick 2 and no problem about the third trick. So 1296 possibilities exist.

The human analyst will notice at once that he doesn't have to worry about all these—as far as winning tricks is concerned East's cards are all identical in value and so are North's as far as his hand is concerned.

An ingenious programmer might profitably take advantage of this but now you have the old problem—a lot of program to test for this sort of possibility, or a shorter program that races through all the combina-

tions quicker in the long run?

If you think about the logic of solving the simple problem above, then you must think on these lines:

- 1) There are 6×6 ways for North-South to play their cards.
- 2) Associated with each of these 36 ways there were 36 ways for East-West to play their cards. Calculate the number of tricks made in every case. If, for any of the North-South possibilities, at least two tricks are made whatever East-West try, then the solution has been found.
- 3) There may be more than one solution, so the search continues.

In this way all possibilities are explored and a definite answer (or answers!) obtained. Even this can be an irritating affair to program and there are the obvious complications of more cards in each hand, all four suits being involved, and the possibility of a trump suit.

In the next article I will consider how the "exhaustive search" can be reduced to a "tree search". The idea is that once a "branch" has been found to be unsuitable, it isn't explored any further. There will be the certainty of far more subtle programming being required but the length of the calculation may be reduced by several orders of magnitude. Then we will be in business for solving six or seven card (per hand) problems but still not tackling a full deal.

SEARCH FOR A SOLUTION

Finding ways a computer can overcome bridge problems presents many unique difficulties.

The "exhaustive search" technique which helped chess computers "Play and mate in two moves" over 15 years ago, has limited possibilities when it comes to bridge.

Consider a full bridge hand—in how many ways can it be played? Much depends on the distribution of the particular hand but if you argue that the n th trick can be started in (14- n) ways and that the other three players (on average) will be able to follow suit with about quarter of their remaining cards then at least we will have an estimate. It looks like $13 \times 3 \times 3 \times 3$ for the first trick, $12 \times 3 \times 3 \times 3$ for the second, $6 \times 2 \times 2 \times 2$ for the third, $1 \times 1 \times 1 \times 1$ for the last.

That is roughly $13! \times 3^3 \times 3^3 \times 3^3 \times 3^3$. And that is—but I'll leave you to work it out... With present computing power it is obviously hopeless to use this method on full hands.

Suppose that we consider a simple three-card problem "South is on

E SOFTWARE SOFTWARE SOFTWARE SOFTWARE SO REVIEWS REVI

FAST FURIOUS AND LOTS OF FUN!

You are at the controls of a supersonic Starblazer jet fighter on a mission to destroy enemy radar bases which are turning your air force's chance of a successful mission.

The bases are particularly hard to hit as you can only drop your bombs when you are close to the ground, running the risk of crashing into the pylons which flank the radar dishes.

Points can also be scored by bombing the buildings in and around the radar installation —

STARBLAZER

though this of itself will not qualify you to go on to mission two, and attempt to bomb the supersonic tank.

Picking off these buildings is, however, good bombing practice — and I was soon able to work out just the right height and position on the screen to hit the radar bases at least three out of five times.

Once you have hit a radar base your Starblazer zooms up to

the top right hand corner of the screen and mission two flashes up the message "destroy supersonic tank". This, alas, is easier said than done.

First you must dodge or shoot a barrage of missiles which fly at you at great speed moving left to right across the screen. If you survive this onslaught you can then attempt to dive-bomb the supersonic tank which — maddeningly — seems to be always just out of your bombing range.

Missions 3, 4 and 5 were unfortunately beyond the ken of this particular Starblazer — but for the benefit of any ace pilots who may be reading this you have to bomb the ICBM — a mushroom

like structure — attack a more advanced tank which flies back. If you survive all that you get a chance to wipe out the HQ.

I have a particular affection for this type of game and Starblazer was no exception. It offers fast action and sufficient difficulty to make you keep coming back to improve your performance. I played the game using the keyboard though it can be played with a joystick — which I would imagine would greatly improve playability.

Starblazer runs on Apple II in 48K. It is available from the London based Software House at £15.

A HAUNTING CHALLENGE

SNAPPER

Ghosts may come and go but Acornsoft's Snapper will haunt you for some time.

This is Pacman as enjoyed in the arcades with just a few changes which will probably go unnoticed by many who buy this cassette. The maze has undergone a few changes (programmer's licence! but the tunnel is still there). So is the long and dangerous stretch at the bottom of the screen.

The ghosts are as perfect as possible, eyes swivelling in the direction they are heading.

On being eaten their eyes return to the house in the centre of the screen and the blue edible specimens are as arcade players will remember them.

Perhaps the most noticeable change is with the energy dots which when traversed during ghost-chasing, are not consumed.

Keyboard control soon becomes familiar and then the family tussle to put their names on top of the high-score chart.

It's all there, music, lights and action for £9.95 inclusive of VAT for the BBC Model B.

- Getting started 7
- Value 6
- Playability 9

The complete guide to discovering if you'll enjoy the cassette or disk reviewed:

Getting Started refers to loading instructions, loading difficulties and whether or not the game is easy to understand.

Value is the value-for-money side. Does the cassette or disk appear well presented and put together? Does it make good use of the machine's abilities?

Playability is probably the most important mark to look at. Is the game a good example of its type? If it is an original idea, will it succeed in holding your attention.

The main bulk of the review is the place where our games testers can give their own opinions on the offering but the marks seek to provide an accurate buying guide.

SLOW INVADERS WILL FAIL TO CONQUER EARTH...

You won't need to be a king of the arcades to repel this squadron of Vic Invaders.

The game is written in machine code and apparently has five skill levels — though I could discern no great difference between skill level one and five.

The game gives you no mystery flying saucers to shoot at — thus ignoring the most enjoyable aspect of the arcade version of Space Invaders.

It is also very easy to stay alive. All you have to do is keep the space bar depressed and a constant stream of missiles will cancel out the missiles of the advancing fleet. I almost managed to wipe out an entire fleet by keeping the space bar depressed without moving sight or left.

Another disappointing feature of this game is that you cannot fire and move your gun turret at the same time. This makes it

VIC INVADERS

impossible to zoom in and hit that last invader on the run with style.

The game could also have been greatly improved if the high score display kept a running total of high scores, rather than giving every last score as the current high score, whether it was higher or not.

The producers must have realised it was rather easy and gave just one life, instead of the usual three.

The missiles in this game also left a little to be desired — jerking skyward and pausing mid-screen for breath.

Vic Invaders is available from Stockport based Bridge Software. It costs £6.90 and runs on the unexpanded VIC-20.

- Playability

A NICE LITTLE MOVER

There was something very similar about the way this chess program went about assuring itself of a good review.

My first encounter with it came on level two where it boasted a 35 second response time to the average move. (Careful timing put it a little above this but perhaps my moves were just above average).

It started brightly despite not having a book opening repertoire to fall back on. Snepping up my queen's bishop's pawn gambit, it held onto the extra piece tenaciously enough during the opening and also developed its pieces well. Doing, just enough, in fact, to make me think I had found a worthy opponent and then, when it sensed I was ripe for the taking, it capitulated to a particularly sweet queen and bishop attack and allowed itself to become mated soon afterwards so that I didn't get bored by the endgame.

ZX CHESS

The result: one reviewer feeling particularly pleased with himself and more than willing to write nice things about the opponent which had just given in so graciously.

Further testing on its other levels still suggested that the 35 second response game is the best to play unless you have something to do whilst awaiting in next move in the higher levels.

At lowest response level (five seconds) I felt I was getting my own way rather too easily.

The screen disappears while the computer is thinking, so you will need your own board to study if you are going to take the game seriously. The computer display does take a little getting used to, as does algebraic notation but the extensive instructions are a help here.

The computer will not allow illegal moves, it will let you play

black, it understands casting and en passant.

I miss not being able to play through my favourite openings with impunity but what can you expect for £8.95?

Sinclair ZX81 Chess is produced for the 16K machine by Psion.

DEADLY DEATH SHIPS

OMEGA RACE

Omega Race is that rare thing in computer software — a truly compulsive game.

The year is 2003. Aliens are attacking the city of Komar. You must defend the city in your arrow shaped space craft.

The game is played using VIC paddles which can be purchased from most VIC dealers at around the £14 mark.

The ship is quite difficult to control and at first appears to float around the screen at will. Only after several goes did I discover that the ship will zoom forward in the direction of the arrow if the fire button is kept depressed.

The paddle dial turns the ship full circle — the secret being to spin and fire as you move forward — just as in Asteroids. But go steady — as once you have chosen a certain course you will have to fire quickly to clear all the aliens out of your way.

Five different types of alien track you around the rectangle in

the centre of the screen which displays your score, the current high score and the number of ships you have left.

Most deadly are the Death Ships which spin around the screen at great speed and can shoot and manoeuvre.

Command ships can also shoot and track you around the rectangle for the most part of the game multiplying in number as the game progresses. Droid ships are slower and easier to kill than Command ships though they will track you with dogged persistence.

Just to make things a little more difficult there are also two types of mines — Photon mines and vapour mines dotted around the screen, which are easy to crash into as you race around the screen chasing a Death Ship.

The game features an invisible force field at the right and left of the screen which, if you are a skilled player, you can use to your advantage — bouncing off it

at full speed and then swivelling to shoot — or to take the corners at full throttle.

Omega Race is practically identical to the arcade game of the same name. Playing the game on your VIC-20 is every bit as good as playing the game in an arcade.

This is a relatively simple game with not particularly inspiring graphics — they are very geometrically similar to Asteroids.

ords graphics. But for sheer playability Omega Race is by far the best game I have played on the VIC-20. Nothing else comes close.

Omega Race is the latest addition to Commodore's range of solid state plug in games. Available from VIC dealers at £24.95 inclusive.

HARDCORE

A GAMES PLAYER'S GUIDE TO THE TEXAS T.I. 99/4a

TEXAS — AN AMERICAN FAVOURITE

The Texas Instruments 99/4a is a recently re-vamped version of the 99/4 which, in 1978, represented the giant American electronics firm a first venture into the microcomputer field. Since then the T.I. 99/4a has established itself as one of America's more popular home computers.

The basic package is a 16-bit (compared to the more common 8-bit) microprocessor which gives you 16K of RAM memory expandable up to 48K.

The T.I. is a colour computer with 16 foreground and background colours although the machine will function adequately as a normal black and white television.

The keyboard has electric typewriter style keys — 48 of them — with control

and function keys (user definable), full upper and lower case capability, alpha lock, and auto repeat key.

The computer also has impressive sound capabilities — five octaves, three simultaneous tones, plus noise generator.

It is fairly compact measuring 15x10 inches, and 2½ inches high. It weighs about 5lbs and runs off 240 watts in the UK.

The machine is now in the shaga of around the £280 mark, the price having dropped by £100 in the last 12 months. It seems a fair assumption as well that the price will continue to fall with rumours of a drop in price of the VIC-20, the appearance of the Spectrum of £126 and the continued success of the Atari 400

T.I. EXPANSION

The 1.1 has a variety of peripherals available to enable you to expand the system as you require — either for home use, or for commercial applications.

The most simple expansion to your T.I. is to purchase some leads and plug in your cassette recorder — this enables you to store your own programs, or to purchase other pre-recorded cassettes that are available.

The Peripheral Expansion System is a show-box shaped unit in brushed aluminium with eight slots for peripheral board-type cards, one of which connects the system to the computer console. You simply plug in the required function card, for example Extended Basic, Meeting List, or one of the other cardbages. The system will also enable you to use one disc drive within the enclosure. This costs £190.

The T.I. Disk Memory System enables you to save or load Basic programs to later use. It incorporates a disc controller and up to three disc drive units. The discs are single sided, single density, 5 1/4" mini-floppy diskettes each storing up to 90,000 bytes of information. The T.I. DMS costs \$740.

Magnus Pike tries out the T-1 994a during a recent Texas press conference

basic console — some of which are manufactured by Texas, but the Interface Card enables you to use accessories from other manufacturers as well. The Interface Card is a communications link which enables you to exchange and receive data over the telephone line with other computers. It is available at £130.

The T.L. printer plugs in directly to the computer console and does not require an interface. It prints data in a 32 column, 5 x 7 dot matrix characters at a speed of 30 characters per second. The machine has 32 graphic symbols (pre-defined) and can be used to plot — printing on thermally sensitive paper.

TI manufacture a set of Wired Remote Controllers — joysticks, which plug into the

HARDCORE

A GAMES PLAYER'S GUIDE TO THE TEXAS T.I. 99/4a

back of the computer console. They are made of hard black plastic with the fire button mounted above the lever. Available from T.I. dealers at £24.00.

All prices are recommended by T.I. — but you would be well advised to shop around as prices vary from one retailer to another.

SPRITELY BASIC

The TI 99/4a runs under T.I. Basic when no solid state cartridges are plugged into the software port. The main difference from Microsoft is that T.I. Basic does not have the PEEK and POKE functions, familiar to most other microcomputer users.

An Extended Basic is produced by T.I. which plugs into the software port on the front of the console. Extended Basic has all the features of Basic with an additional 40 commands and sub programs. Extended Basic also has "Sprites" or programmable moving characters.

T.I. Logo is an educational language designed mainly with young children in mind. It uses an easy to understand set of commands and instructions within computer illustrated exercise. It requires the expansion system, disc drives, and will be aimed mainly at the primary school market.

UCSD-Pascal is an advanced language for the more experienced programmer. You will need the 32K Byte RAM expansion and the T.I. Disc Memory System.

The software package contains the Pascal compiler to translate Pascal programs into P-code, an editor, filer and utilities package for screen editing and file management and an Assembler linker package for developing TMS 9900 Assembly Language programs.

The P-code compiler enables you to run programs which have been written for other computers on your T.I.

TMS 9900 Editor/Assembler extends the computer by giving the user direct access to all system features, such as speech, sound and the graphics end interfaces. This language allows the fastest possible speed to be obtained from the micro computer's 16-bit microprocessor.

CLUB TOGETHER

TIHome is the TI 99/4a users' club. It was set up a year ago by keen hobbyist Paul Dicks and is run independently of T.I. The annual membership fee is £9.95 for which members receive a news letter every two months, have access to a software library, and can benefit from TIHome's connections with the American 99/4 Users Association.

The club now has over 500 members. If you would like to join the club write to Paul Dicks at 157 Bishopslord Road, Morden, Surrey, SN4 6BH.

QUALITY GAMES

The availability, range and quality of software has been one of the chief criticisms levelled at the T.I. 99/4a since its launch in the UK.

Since then T.I. have been working hard to improve this state of affairs. In particular, they will be publishing a software review with names and addresses of all the independent software writers known to T.I. This is to be available in September 1982.

Other plans for improving the availability of software include a scheme whereby individual companies purchase patented T.I. cartridges and then write their own programs on them, which they can sell independently of T.I.

Texes is tight-lipped about which companies have taken up the offer so far, although it is known that Thom EMI's computer wing has accepted the offer and will be producing software — mainly games — for the T.I. 99/4a.

T.I. manufactures some six hundred software packages itself. There are a number of business cassingles, some interesting educational packages, and a wide range of games including some of the old favourites such as Space Invaders and Pacman. The quality of the graphics on some of these games is of the traditional high standard associated with solid state ROM cartridges. It has to be said however, that these are not cheap, Space Invaders, for example, costs £40.

Milton Bradley a US-based toy manufacturer produces a range of five games for the T.I. 99/4a which are imported to the UK by T.I. and are available from dealers.

In total there are over 1,000 packages available in the U.S. or the T.I. — on cassette, disc, or cartridge-manufactured by a number of companies. T.I. are negotiating with a number of U.K. importers to bring these packages into the country.

NOW READ ON...

An instruction manual is supplied with the T.I. 99/4a and is written for the beginner. You will also receive a *Users Reference Guide* and a *Read This First* pamphlet which shows you how to set up your home computer.

For the more advanced user, Texas publish *Programming Basic* with the TI Home Computer. This 300 page book takes you beyond Beginners' Basic. It costs £7.

There is also a bi-monthly American magazine called the *99'er* which is written specifically for owners of T.I. home computers. It is now available in the UK from your local T.I. dealer at £2.35 or by subscription at £13.00 for six issues direct from M.P.L., 8 Cambridge House, Cambridge Road, Barking, Essex, IG11 8NT.

IMPORTANT NOTICE

To all owners of the following games: *RACER* in 1982 & 1982 *AUDIOSONIC*, *PRINTZ*, *PRINCE*, *UCSD* and *ACEPTIONIC* MPU 1000 microprocessor games.

DO YOU HAVE TROUBLE OBTAINING CARTRIDGES FOR THE ABOVE GAMES? You can now have access to DATABASE cartridges. You have a DATABASE CARTRIDGE ADAPTOR (its lens applied for) or not available for use £4.95 and will enable you to use all DATABASE cartridges to its full games.

If you cannot obtain one locally, send a cheque or postal order for £4.95 for an adaptor and a set of currently available cartridges. Enclose your name and address and send to: **VOLTAIR LTD, DEPT 1001 PARK DRIVE, BALDOCK, HERTS.**

OUT NOW No. 22 DRAUGHTS

OUT SOON No. 24 MUNCH & CRUNCH.

VIC 20 GAMES

Task Enterprises Computer Software presents *Joan's 1-5* games for the unranked VIC 20 for only £4.95! *Shelt*, *Simon 2-2*, *Space Breakout*, *Submarine*, *Scrab*. All games have colour and sound and come on a quality cassette.

For *JOUER 1* send a cheque/P.O. for £4.00 made payable to Task Enterprises Computer Software and send it to:

T.E.C.S. c/o Stephen Saville 131 Glynedd Wood Road, Oswestry, Shropes, Sh.

VIDEO GAME T-SHIRTS

Superb 5 colour screen printed video game motif on quality poly cotton T-shirt imported from U.S.A. where they are this year's fashion craze. Available for first time in U.K. Sizes: Kids 10-12, 14-16 Adult S, M, L, XL. Motifs: T-shirt colour — *Pacman/White*, *Pacman/Tan*, *Asteroids/Black*, *Missile Command/Blue*, *Donkey Kong/White*, *Tempest/Black*, *NBA Kids* or *Ski*, *Frogger/White*, *Only £4.50* (inc. P&P). £4.00 (inc. kids sizes). Slight alternative motif if possible. Cheque/P.O. to: **Naili Home, 3 Victoria Road, Leamington Spa, Warwick**

STARWES

Computer moderated play by mail game. As featured in this issue. Rules only £1.00. From: I.C.B.M., P.O. Box 94, Bath Street, Walsall, W. Midlands. Also available, brand new p.b.m. game. Universal £1.00 rules only.

HAVE YOU SEEN MR MICRO'S CATALOGUE? IT CONTAINS OVER 50 PROGRAMS FOR THE VIC 20. For your copy send a 9 x 4 SAE to **MR MICRO LTD.** PO Box 24, SWINTON MANCHESTER M27 3AL.

Brainwave

MIND ROUTINES

Consider the octahedron above with the 8 faces marked a through to H. There are 6 nodes N_1 to N_6 and four faces meet at each node.

By using the numbers 1-8 place each number on a face. There are four questions this month.

1. Calculate the node values as the sum of the four adjacent sides. What is the maximum product of all 6 nodes

which can be obtained?

2. Using the node values as in 1 what is the minimum product of all 6 nodes which can be achieved?
3. Calculate the node values as the product of the four adjacent sides. What is the maximum sum of all 6 nodes which can be achieved?
4. Using the node values as in 3 what is the minimum sum of all 8 nodes which can be achieved?

You should submit your values for A-H for each of the 4 answers.

Example: Suppose we numbered the sides A=1, B=2, etc H=8.

Then the node sum $N_1 = 1+2+3+4 = 10$.

And the node product will be

$$N_1 = 1 \times 2 \times 3 \times 4 = 24$$

For all 6 nodes we have

Node	Node Sum	Node Product
1	10	24
2	14	60
3	18	252
4	22	672
5	18	150
6	26	1680

Product of sums = 25945920 2945 = Sum of products

These values lay somewhere between the maximum and minimum results.

NEVERA CROSSWORD

ACROSS

1. Pacman ghosts in edible mode (4,6).
7. Sure me confused. Restart the program (6).
9. Articles on wood provide one kind of computer (6).
12. Times are mixed up (3).
13. Man, high class king, first class warrior (8).

20. Computer Company in scans One and two (3).

POWER AND THE MICRO

Single rail power supplies, i.e. those with only one voltage output, which is usually all that is needed for most of the most common machines, are quite easy to build, so long as you go about it in a sensible manner. I will give you a few ideas to work on and some useful precautions to take. It is of the utmost importance that the output is fully protected and fail-safe as a power surge on the board is fatal to the chips.

Power supplies have become far simpler by the introduction of voltage regulator I.C.s. These chips come in different voltages and current ratings, depending on your requirements. Most are fully protected from over voltage, short current and over heating. Basically all they need as an input is a DC voltage a couple of volts above that of the output.

There are, however, a few external components which are recommended for safe use. These are usually bypass capacitors and are generally available in your local components' shop, along with the rest of the bits and pieces.

Below, I have outlined a simple power supply with a transformer, a bridge rectifier comprising 4 diodes, a smoothing capacitor and the regulator unit, including capacitors. This arrangement would be quite adequate in its present form to cope with most applications. It would, however, be advisable to add a few extra safety components.

Going from left to right we first come across the transformer. Most these days have two separate primary windings so that they can be used with both 120 or 240 volt mains supplies. They must, of course, be

I will shortly be looking at the construction of some very fascinating kits which can be added to several of the most popular home computers to turn them into a door rather than just a thinker. When I came to think of it though, a problem struck me between the eyes. That is, the power consumption of the combined machines. For example, the standard power supply of the first batch of ZX81s would only run the computer and nothing else. The cure was to offer a larger unit to cope with all the subsequent parts. It would of course, have costed a lot cheaper to construct your own.

wired for 240 volts in this country. The first extra component is a mains voltage dependent resistor or transient suppressor. These items are wired between the live and neutral of the mains. They act normally as an open circuit, until a higher than usual voltage is applied when they go short circuit. Make sure that your mains fuse is light enough to protect the mains cable from over heating, if the high voltage is maintained.

Also, make sure that the transformer, and all other components for that matter are able to supply or carry the current which you require. If you are aiming to achieve 5 volts at the output a 6-0-6 transformer will be sufficient if the secondary coils are connected in parallel.

From the diagram that would mean connecting pins 1 to 3 and 2 to 4 and taking the pairs to opposite sides of the bridge rectifier. Once smoothed the 6 volts a.c. will become approximately 8 volts, this being sufficient to feed to the regulator.

Depending on the current capacity of the regulator you are advised to get a transformer which will supply twice that required at the

output. This will ensure that the transformer does not misbehave itself by giving out little spikes.

Transient suppressors could also be used before the diode bridge, although this is not absolutely necessary. Diode bridges can be obtained for different current ratings and you should aim to fit one which can cope with more than you require. This will keep the operating temperature well down.

To smooth the AC you will require a large electrolytic capacitor in the millifarad (thousands of microfarads) range depending on the current drain. Each capacitor is graded in capacity, voltage and ripple current. It is advisable to over estimate the last two by, say, a quarter.

Remember that the voltage specified will be the output from the bridge and not the regulator, so for a 5 volt regulator with 8 volt input a 10 volt electrolytic would be sufficient, although 16 volts will be better.

There should be with the regulator a specification sheet indicating the type and value of the required capacitors. Usually, though, a solid tantalum is used on the input with a disc ceramic on the output to suppress little spikes from the regulator. Without going overboard with protection this is all that you will need for a perfectly workable power supply. I would recommend that the unit is built up on one of the stripboards, taking care not to heat up the tracks too much.

This technique of building power supplies can be used to produce multiple rail versions for some of the more advanced machines if required. Enough has been written on power supply for you to go away and design your own power station, so be adventurous and save yourself some pennies.

WE PROUDLY PRESENT, FOR THE VIC 20

THE INTERNATIONALLY SUCCESSFUL MYSTERIOUS ADVENTURE

These superbly written Machine Code Adventures have been enjoyed by TRS80 VIDEO GAMES owners in Britain for well over a year now and are currently taking the U.S. by storm. The Author has now implemented these absorbing programs on the COMMODORE VIC 20 FITTED WITH 64K RAM PACK.

ALL ADVENTURES IN THIS SERIES INCLUDE

Split screen display. Ultra fast Machine code responses. Save game to cassette feature. Simple two word command entry system. 70 Locations to visit. 30 Objects to manipulate. 20 or more "problems" to overcome.

ADVENTURES PRESENTLY AVAILABLE

- 1) THE GOLDEN BATON — ventures into a strange province of danger and evil magic to retrieve the stolen Baton of King Terrenal.
- 2) THE TIME MACHINE — As a newspaper reporter you have been sent to the old house on the moors to investigate the eccentric Dr. Parker.
- 3) ARROW OF DEATH (Part 1) — In the first part of this epic Adventure you must find and destroy the source of the evil light which has befallen your homeland.

These are the first three of a series which could ultimately total more than 20 Adventures.

WARNING: — Only experts, courage and few cunning can survive a virtual onslaught on these dangerous missions.

You can't get a Home Computer from Texas Instruments under 16 K RAM.

**UNBEATABLE VALUE
AT AROUND £200**

Make the right move into computing with the Home Computer from Texas Instruments. It gives you a large combined RAM/ROM capacity up to 110 K Byte and the ability to expand with a full range of peripherals and software. So as your knowledge of computers increases the TI Home Computer will grow with you.

Just compare the versatility of the TI Home Computer with its price—you'll find it real value for money that will prove to be a good long term investment.

The TI-99/4A is a sophisticated computer designed not only for the beginner with its ease of operation, but also for the professional with its vast computing power through a 16 bit microprocessor. And it simply plugs into an ordinary household TV set.

With its high resolution graphics with 32 characters over 24 lines in 16 colours (256 x 192 dots), 3 tones in five octaves plus noise, and BASIC as standard equipment and options such as other programming languages—UCSD-PASCAL, TI-LOGO and ASSEMBLER—and speech synthesis, you'll find that the TI 99/4A more than compares with the competition. Especially when the starting price is around £200. When you want to solve problems there are over 600 software programs available worldwide—including more than 40 on easy-to-use Solid State Software Modules.

After all, from the inventors of the microprocessor, integrated circuit and microcomputer, it's only natural to expect high technology at a realistic price.

We'll help you do better.

WHAT PEOPLE ARE SAYING ABOUT OUR . . . BBC MICRO GAMES

I bought all your tapes to date for the BBC Micro and I think they are just super, especially STAR TREK and the sound effects in CANDY FLOSS really made me sit up! Well done and keep them coming!
J. S., Paisley

I was very impressed, not only with the cassette, but also at the speed at which it came!
— R. L., Cheshire

I must congratulate you on your MUTANT INVADERS cassette. I have had it for two weeks now and it is really superb. Incidentally, I have beaten your high score of 4,500 — mine is 7,500!
— S. L., Berks

AND NOW LOOK AT OUR LATEST CASSETTES!

CASSETTE EIGHT Model A Invaders

ZX Spectrum

20 Programs £6.95

The ZX Spectrum has brought advanced computing power into your home. The Cambridge Colour Collection, a book of 20 programs, is all you need to make it come alive.

No experience required. Simply enter the programs from the book or load them from tape (£2.95 extra) and run.

Amazing effects. All programs are fully animated using hi-res graphics, colour and sound wherever possible.

Entirely original. None of these programs has ever been published before.

Proven Quality. The author already has 30,000 satisfied purchasers of his book of ZX81 programs.

Hours of entertainment

● **Lunar Landing.** Control the angle of descent and jet thrust to steer the lunar module to a safe landing on the moon's surface.

● **Meze.** Find your way out from the centre of a random maze.

● **Android Nim.** Play the Spectrum at the ancient game of Nim using creatures from outer-space.

● **Biorhythms.** Plot the cycles of your Emotional, Intellectual and Physical activity. Some would say this is not a game at all.

Improve your mind

● **Morse.** A complete morse-code training kit. This program will take a complete beginner to R.A.E. proficiency.

● **Maths.** Adjustable to various levels, this program is an invaluable aid to anyone trying to improve their arithmetic.

Run your life more efficiently

● **Home Accounts.** Keeping track of your finances with this easy-to-use program will enable you to see at a glance where the money goes and plan your spending more effectively.

● **Telephone Address Pad.** Instant access to many pages of information.

● **Celeander.** Displays a 3 month calendar past or future, ideal for planning or tracing past events.

FOOTBALL MANAGER

Addictive Games

for
ZX81
SPECTRUM
T1980
VIDEO GAME

- * 45 MINI SEASONS AS YOU LIKE * 4 DIVISIONS *
- * PROMOTIONS & RELEGATIONS *
- * FULL LEAGUE TABLES *
- * TRANSFER MARKET *
- * INJURIES *
- * 22 TEAMS OF PLAY *
- * SAFE GAME FACILITY *
- * MANAGERIAL RATING *
- * PICK YOUR TEAM FOR EACH MATCH * 1-4 CUPS *

This is NOT a mere simulation. This is an exciting and highly enjoyable game in which you play the part of a Football Manager coping with the problems and decisions involved in running your club. There are so many features it is impossible to list them here but included are: form (top teams NORMALLY win), giant-skillings, wage bills to pay, and you can even see the match! It is a game requiring a great deal of skill, and people play it for literally hours on end (we have PROOF!).

WE GUARANTEE that this is one of the best computer games you've ever played!

BUT BEWARE, this game is extremely addictive!

MINER FORTY NINER

Not a game — Not an adventure — Not a utility or business program — not just another Space Invader/Arcade type game

INTERESTED?

VIC 20 16K ZX81

SUBSPACE STRIKER ... It comes from out of nowhere and then vanishes back into the ether. With your deadly Animat torpedoes, you unleash havoc in the federation space lanes.

ZOR ... Two mighty robots are designed for one purpose — to fight to the death. In the style of a medieval duel, you must do battle with the Champion of Zor to save your planet.

ENCOUNTER ... Would you know what to do if you encountered extra-terrestrial beings. In this exciting game, you are abducted by aliens and the space invaders play YOU!

STARQUEST ... A voyage of discovery and adventure in the cosmos. With the help of your onboard computer, you seek a habitable planet amidst the perils of deep space.

TRADER ... A trilogy of three full 16K programmes that combine to give a fantastic 48K graphic adventure. As a galactic trader you seek your fortune and deal with some very bizarre customers indeed.

Packed into 16k with full screen animated graphics, Pixel software makes a delightful change. 16k games are £9.50 for VIC 20 and £5.50 for ZX81. Trader is £18.50 for VIC 20 and £10.50 for ZX81. Ask your dealer today or write to us direct for fast service.

How to make the best home computer in the world even better.

Peripherals to turn a powerful computer into a super-computer for the professional.

With VIC, you have the finest home computer money can buy. And the more you use it, the more you will ask it to do.

Pretty soon, you'll want to extend VIC's vast potential to the full; and there is a wide range of VIC peripherals to help you do it.

Disk drives, disk-based software, a printer, cassette unit, joysticks, paddles—with these, VIC computing becomes total computing: giving you true professional power and capability.

We describe the major units here

VIC PRINTER

The VIC Printer, like all VIC peripherals, offers a very high specification at a very competitive price.

It will print programs, letters, business data, graphic displays and so on.

Its main features include: 80 characters per line • Tractor feed dot matrix • 30 characters per second print speed • Full alphanumerics and graphic printing • Double-size character capability • All cables and leads.

VIC FLOPPY DISK UNIT

The VIC single-drive Disk Unit provides a fast, accurate and efficient means of storing and retrieving data and programs.

Together with the Printer, it transforms the VIC 20 into the ideal system for the small businessman or serious computer programmer.

Features include: 174,848 bytes capacity • Uses soft-sectored standard 5 $\frac{1}{4}$ " single density floppy disks • Direct interface to VIC •

Direct compatibility with Printer Intelligent system independent of VIC.

(VIC RAM not required to run it).

EXPANSION MEMORY CARTRIDGES

Special plug-in cartridges are available to expand VIC's memory. 3K, 8K and 16K RAM packs plug directly into the computer

A Memory Expansion Board is also available to develop VIC's capabilities to the maximum.

For full details of VIC 20, its peripherals and software, and a list of your local dealers, contact. The Commodore Information Centre, 675 Ajax Avenue, Slough, Berkshire, SL1 4BG. Tel: Slough 79292.
